

Module 17

Hacking Mobile Platforms

In **Certified Ethical Hacker (CEH)**, **mobile hacking** refers to testing the security of mobile devices, apps, and networks to identify vulnerabilities — **legally and ethically**. While CEH does not go extremely deep into mobile hacking, it **introduces key concepts, tools, and attack vectors** involved in compromising Android and iOS platforms.

What is Mobile Hacking?

Mobile hacking involves exploiting vulnerabilities in:

- Mobile operating systems (Android, iOS)
- Mobile applications (APKs/IPAs)
- Mobile device configurations
- Communication channels (Wi-Fi, Bluetooth, SMS, etc.)

1. Mobile Platform Attack Vectors

These are the ways attackers compromise mobile devices:

- Malicious mobile apps
- SMS/MMS-based attacks (smishing)
- Bluetooth/Wi-Fi exploitation
- Exploiting permissions or outdated OS
- USB-based attacks (e.g., HID injection)

2. Mobile OS Security Models

- **Android:**
 - Open-source and more customizable
 - App sandboxing with user-granted permissions
 - Commonly rooted by attackers for full control
- **iOS:**
 - Closed-source, strict App Store policies
 - Requires jailbreaking to bypass restrictions
 - Uses Data Protection API for encryption

- **3. Common Mobile Threats**

Threat	Description
App Repackaging	Inserting malicious code into a legitimate app
Insecure Storage	Storing sensitive data unencrypted on device
Data Leakage	Through ads, permissions, or misconfigurations
MITM Attacks	Intercepting mobile traffic on open Wi-Fi
Phishing & Smishing	Social engineering via SMS or malicious links

❖ **Android hacking using Mobile Tracker website :**

Mobile Tracker Website – Explained

A **mobile tracker website** is an online platform that allows users to **monitor, locate, or track** a mobile phone's activity or location — often used for **parental control, employee monitoring, or theft recovery**.

What Is a Mobile Tracker Website?

It's a website or web-based application that offers **mobile surveillance services**, typically after installing a small app on the target device (with permission). It can track:

- Real-time GPS location
- Call logs and SMS
- WhatsApp and social media usage
- Browser history
- App usage and screen time
- Device activity (camera, mic, etc.)

 **Important:** Using such tools without the owner's consent is **illegal and unethical** in most countries.

How It Works (Step-by-Step)

1. **Create an account** on the mobile tracker website.
2. **Install a companion app** on the target phone (Android/iOS), often hidden in the background.
3. The app collects data (location, messages, etc.) and **sends it to the server**.
4. You log in to the tracker website dashboard to **view or monitor data in real time**.

Key Features of Mobile Tracker Websites

Feature	Description
 GPS Tracking	Tracks live location and movement history
 Call/SMS Logs	Logs incoming/outgoing calls and messages
 Social Media Monitoring	WhatsApp, Facebook, Instagram message tracking
 Browser History	Shows websites visited
 Camera/Microphone Control	Some tools allow remote camera or mic activation
 Geo-Fencing	Alert when device enters/exits a specific area

Popular Examples (Ethical Use Only)

Website	Description
mSpy	Monitors messages, location, apps – used for parental control
FlexiSPY	Advanced phone tracking with camera/mic access
Spyic	No-root tracking for Android/iOS
Hoverwatch	Tracks calls, texts, and locations on Android
Mobile Tracker Free	Free app for Android monitoring (with consent)

Legal & Ethical Use Cases

- **Parents** monitoring children's online safety
- **Employers** tracking company-issued devices
- **Individuals** locating a lost or stolen phone

Using it **without the consent** of the person being tracked is considered **unauthorized surveillance** and is **illegal** in most jurisdictions.

Technical Behind the Scenes

- Tracker apps use **Android/iOS APIs** for GPS, call logs, etc.
 - Data is encrypted and uploaded to a **cloud-based server**
 - Users access it via **web dashboard** or mobile app
 - Some websites offer **stealth mode** to hide the app icon
-

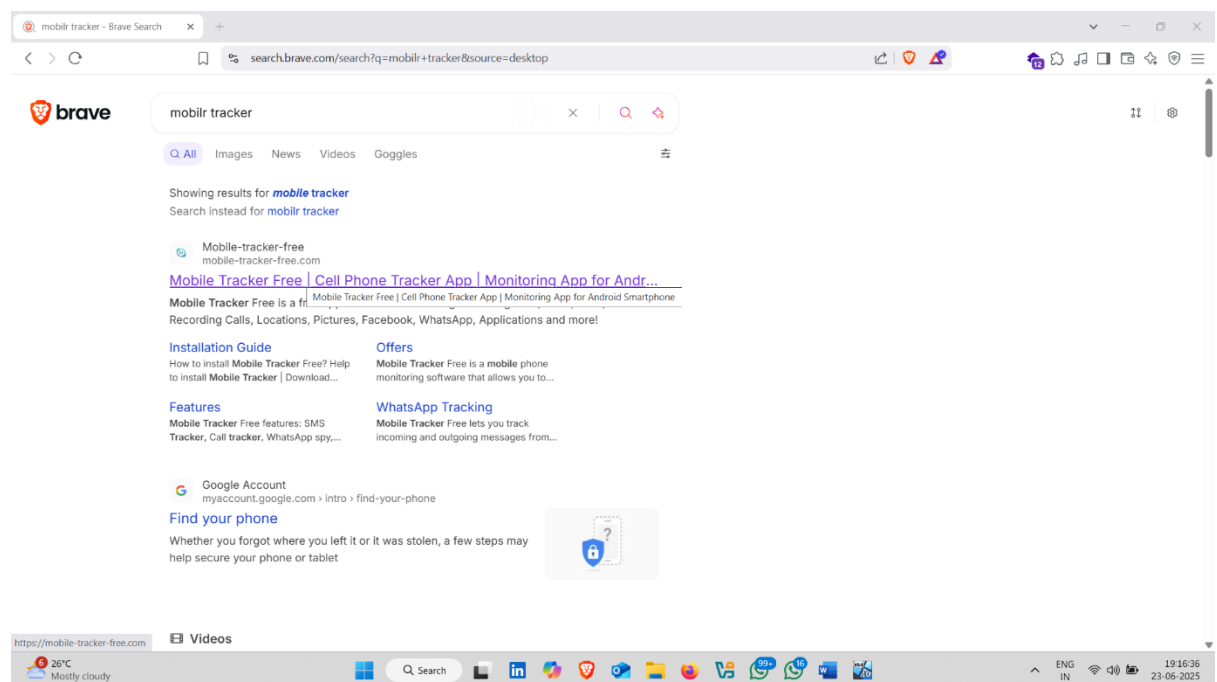

Warning

Never use mobile trackers for spying on someone **without their knowledge and legal permission**. Doing so violates **privacy laws** and can lead to **criminal charges**.

How to use it -:

Open Browser and search Mobile Tracker

Click on First Official Website

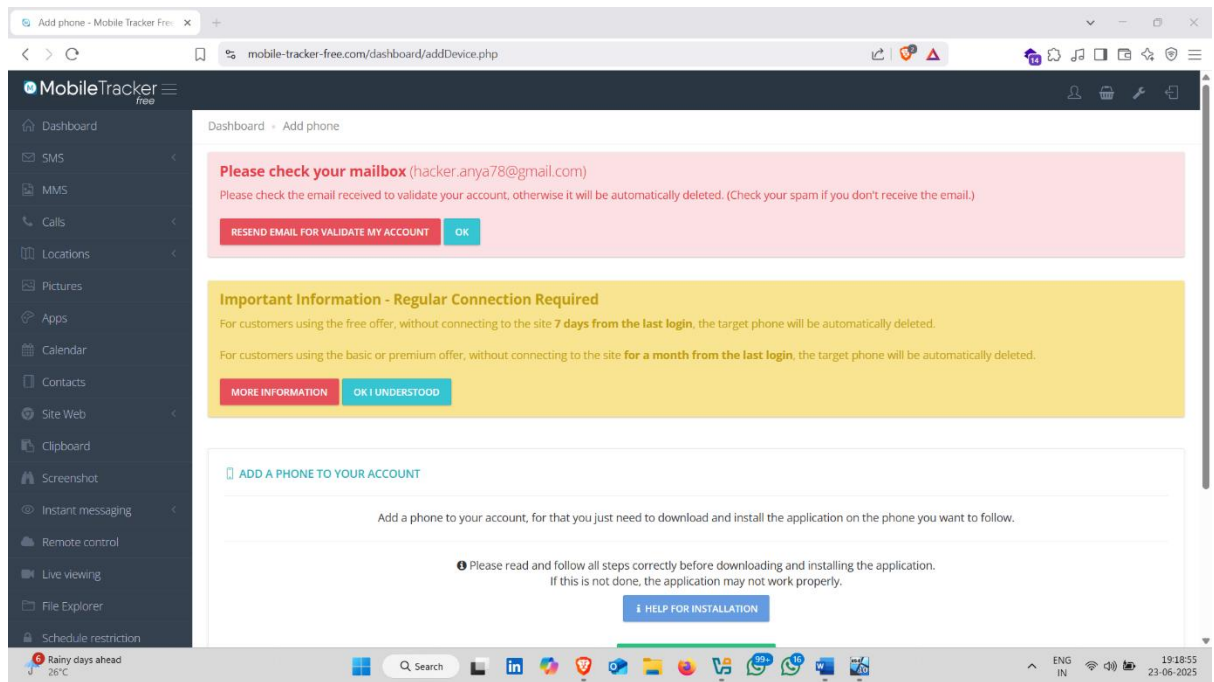

Now Register account

The screenshot shows the registration page of MobileTracker Free. The browser address bar displays 'mobile-tracker-free.com/register/'. The page features a dark navigation bar with 'Register' and 'Login' links. Below the navigation bar, the 'MobileTracker free' logo is on the left, and a menu with 'Home', 'Features', 'Installation Guide', 'FAQ / Help', 'Offers', and 'About' is on the right. A breadcrumb trail shows 'Home > Register'. The main heading is 'REGISTER'. The registration form includes an 'Email' field, a 'Password' field, and a checkbox for 'I agree to the Terms of Use and Privacy Policy'. A blue 'Create my account' button is positioned to the right of the form. Below the button, a link reads 'Already a member? Login here'. At the bottom of the page, there are three sections: 'About', 'Useful links', and 'Legal info'. The Windows taskbar at the bottom shows the date and time as 19:18:03 on 23-06-2025.

After Register , Login Your Account

The screenshot shows the login page of MobileTracker Free. The browser address bar displays 'mobile-tracker-free.com/login/'. The page layout is consistent with the registration page, featuring the same navigation bar, logo, and menu. A breadcrumb trail shows 'Home > Login'. The main heading is 'LOGIN'. The login form includes an 'Email' field, a 'Password' field, and a blue 'Sign in' button. Below the button, there are two links: 'Not a member yet? Sign up now!' and 'Forgot your password?'. At the bottom of the page, there are three sections: 'About', 'Useful links', and 'Legal info'. The Windows taskbar at the bottom shows the date and time as 19:16:47 on 23-06-2025.

Login Successful  

Now , open Mobile Tracker website on Victims phone

And login using your mobile-tracker Website username and password

I NEED HELP

Now provide which permissions that you want to access monitoring on a target device

19:240.92 KB/s

←

Login (Step 1/2)

Validate all these settings if you want the application to work properly!

Enable accessibility

Accessibility is useful for several features of the application (Instant messaging, call recording, live viewing, application blocking and website history).

Activate all permissions

Activate the permissions necessary for the proper functioning of the application

Allow restricted settings

You must allow restricted settings to enable accessibility, access to notifications and SMS permission.

All files access

Allow access to manage all files

Allow location

Always allow location access

Device administrator

Administrator rights prevent the application from shutting down, locking the phone, erasing all data, and blocking the camera.

Enable access to notifications

Hide system notifications for the application and retrieve messages received from instant messengers.

Usage data

Provides statistics on the use of installed applications.

Overlay on other apps.

Useful for the good functioning of the application.

Disable app notifications

Hide notifications for the application.

Android Hacking Using Craxs Rat

A **RAT (Remote Access Trojan) Tool** is software that allows an attacker to remotely control a victim's device (Windows, Android, Linux) over a network.

Common Features:

File Explorer Access

Keylogger

Remote Desktop Viewer

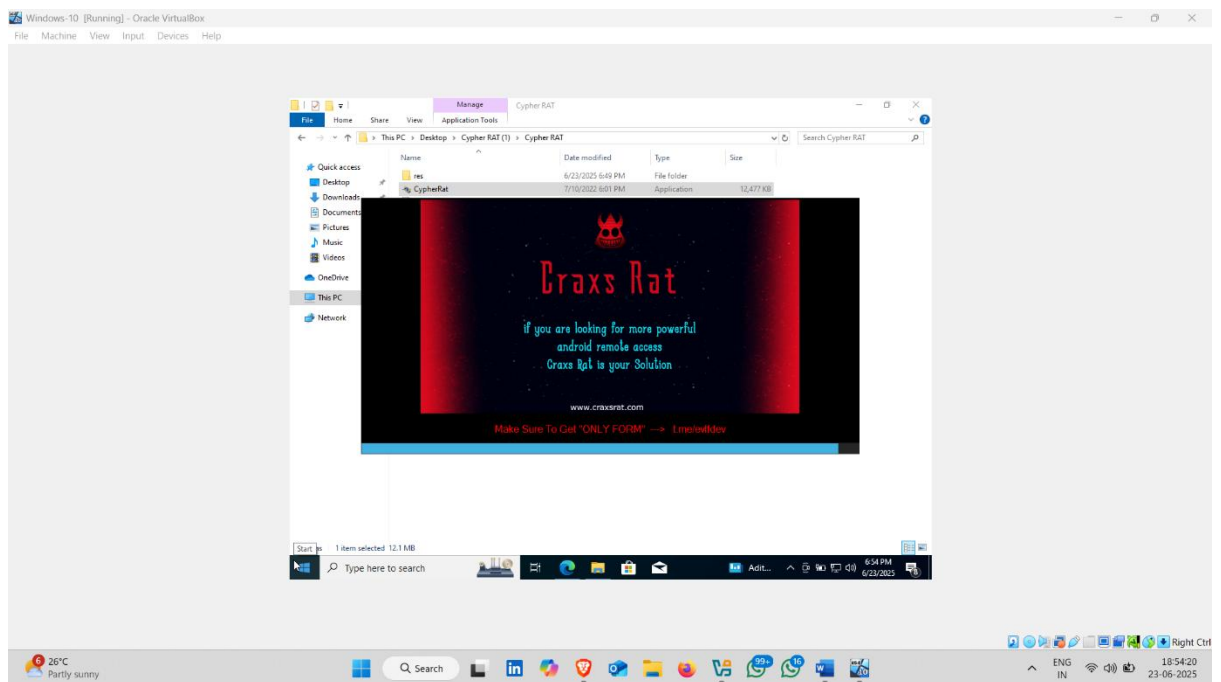

Command Execution

Webcam/Mic Access

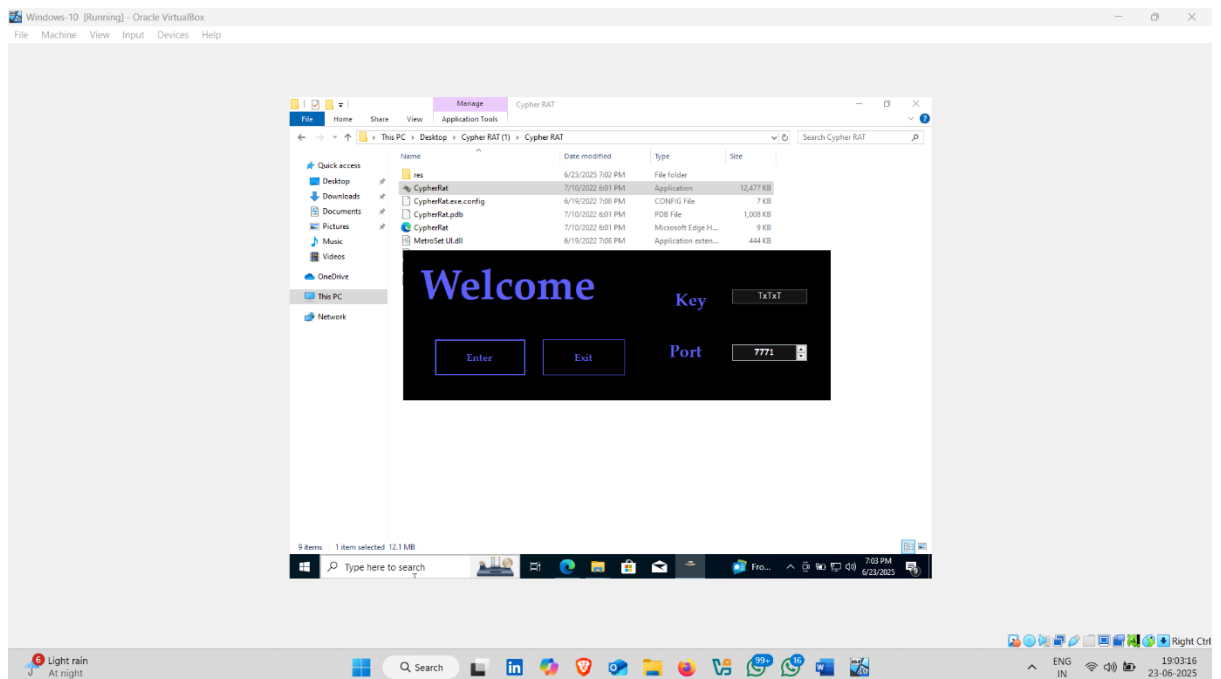

SMS/Call Control (Android)

How to use it :-

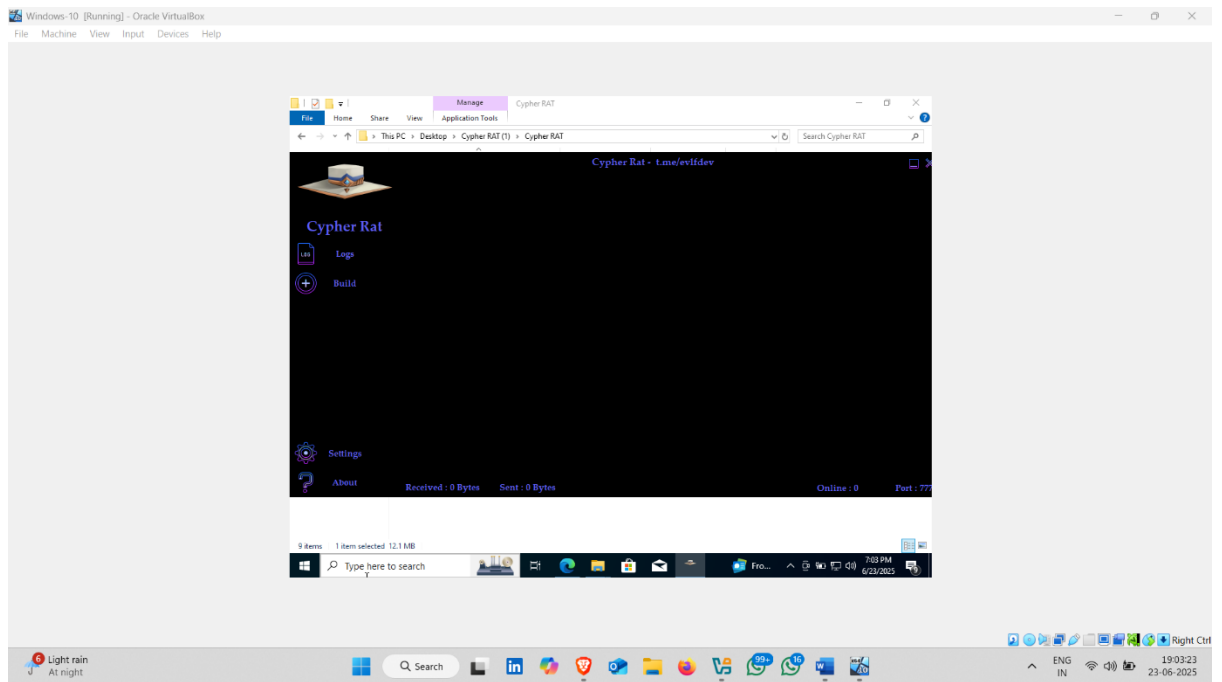

open craxs RAT

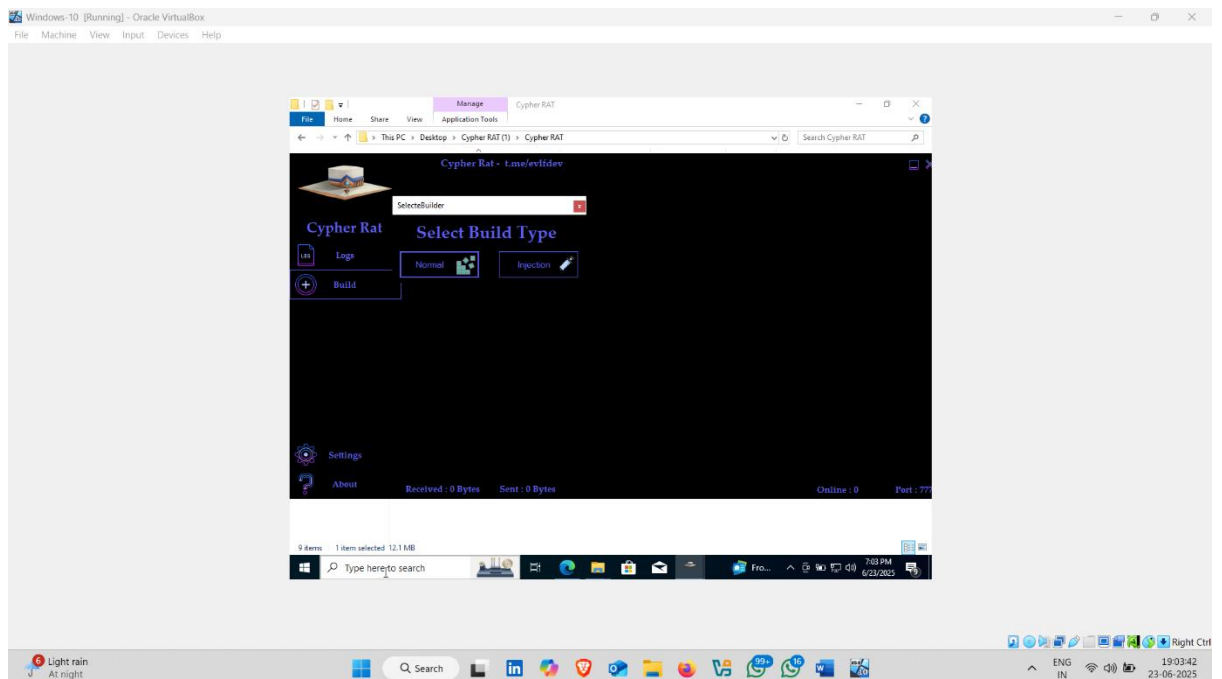

Click on Enter

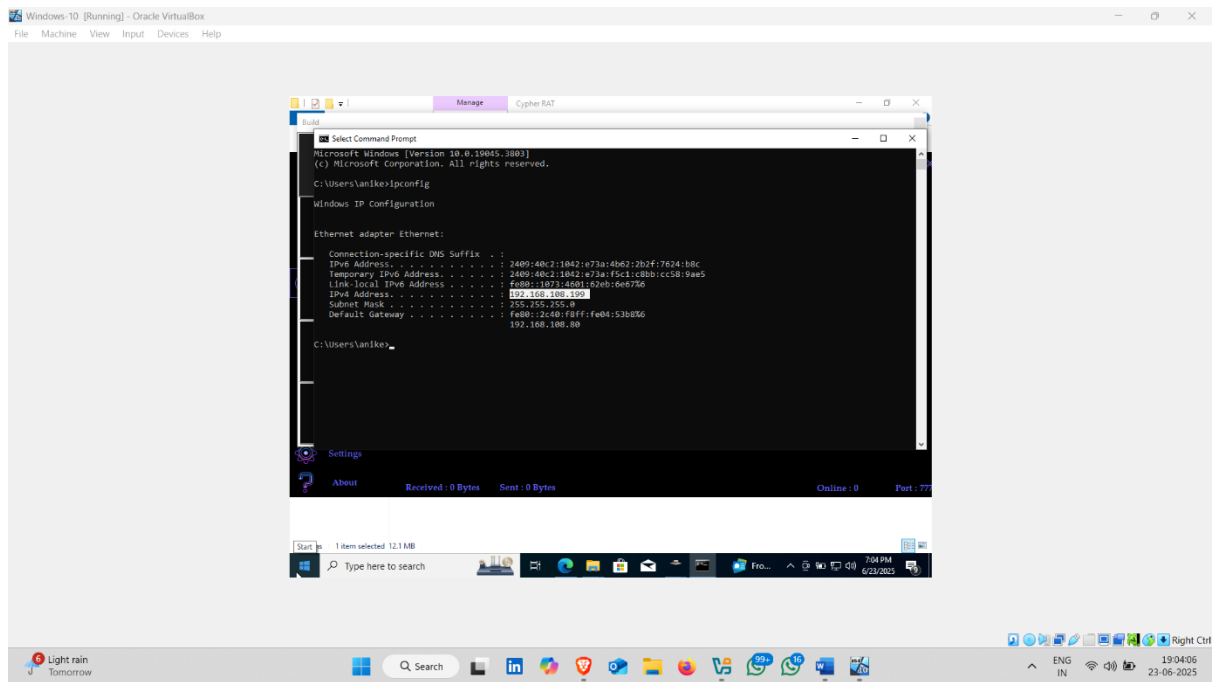

Click on **Build** Option

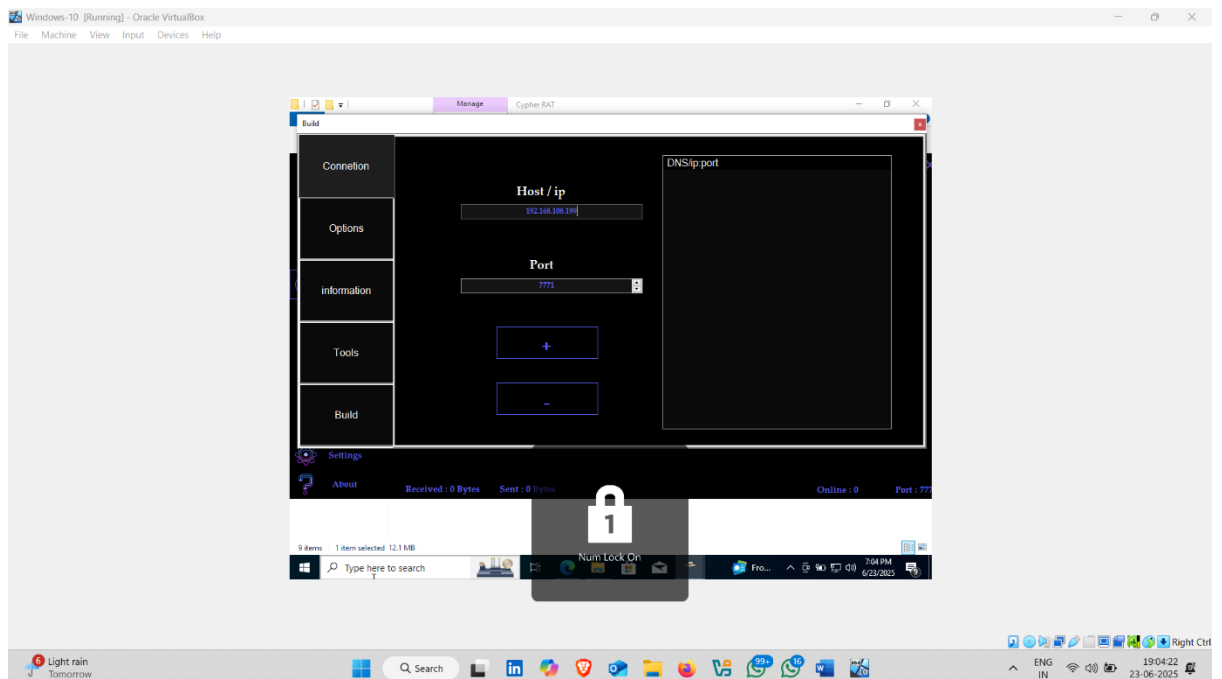

Now Click on **Normal**

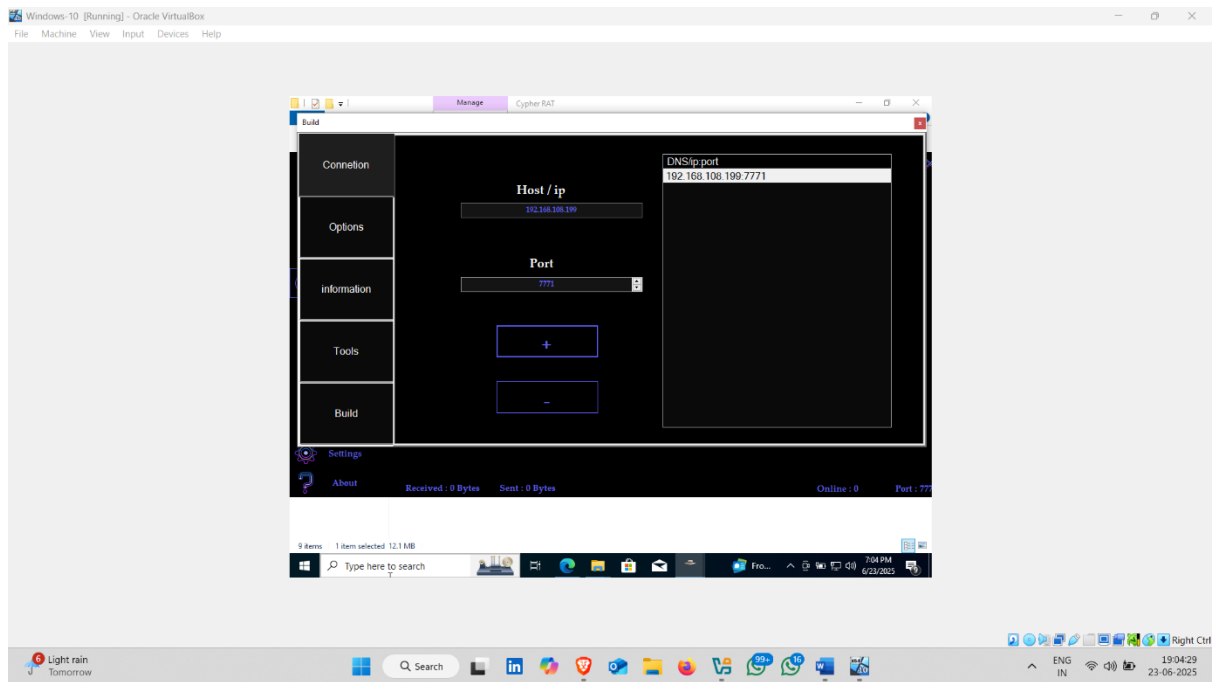

Our Ip Address  

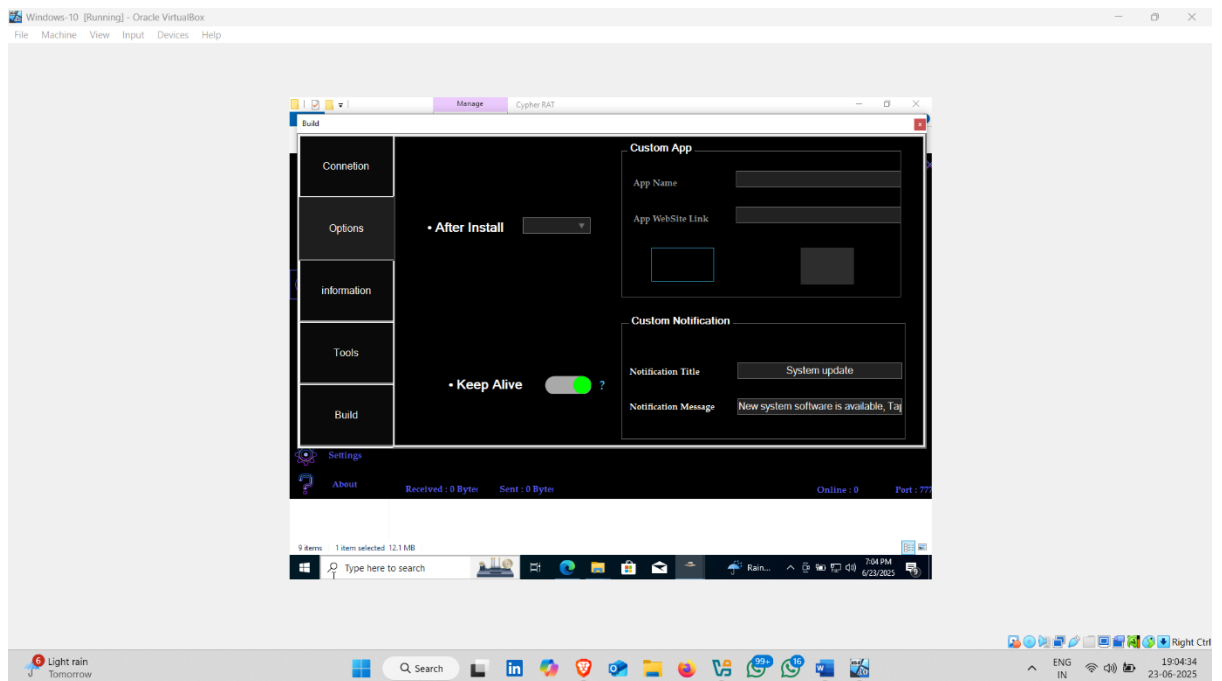

Set Your Ip Address on Host Section

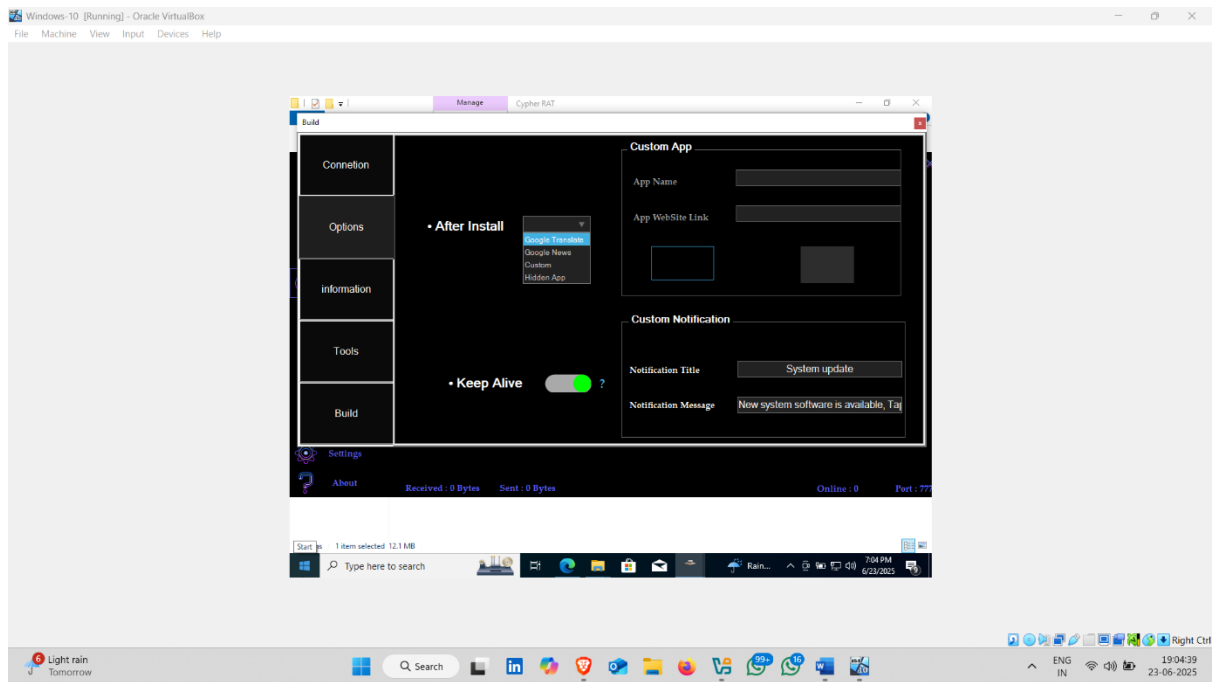

Now click on plus “+” Icon

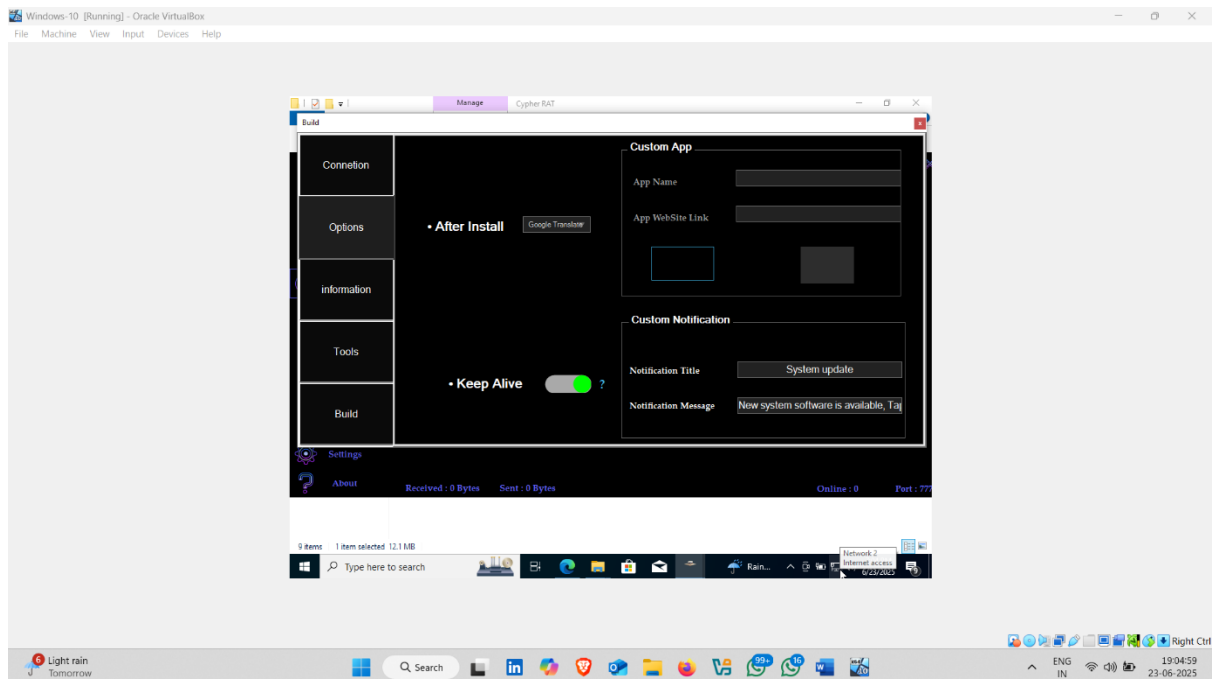

Now click on options

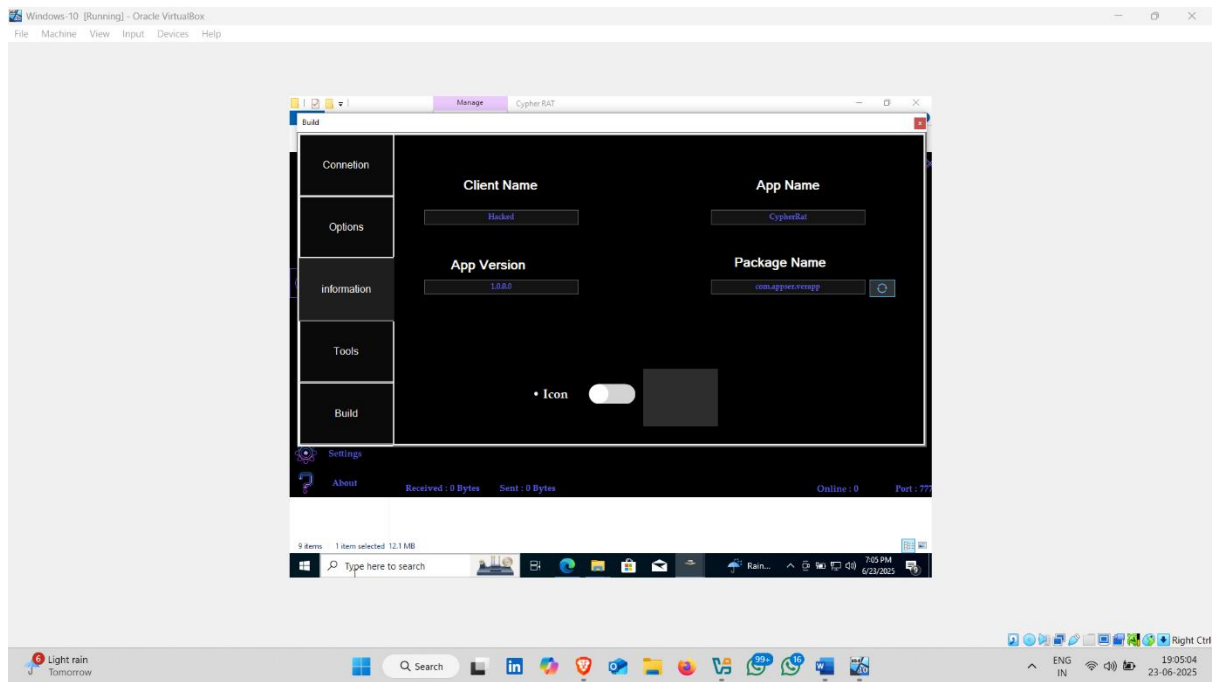

Then Click on After install , a list appear select, now select any option

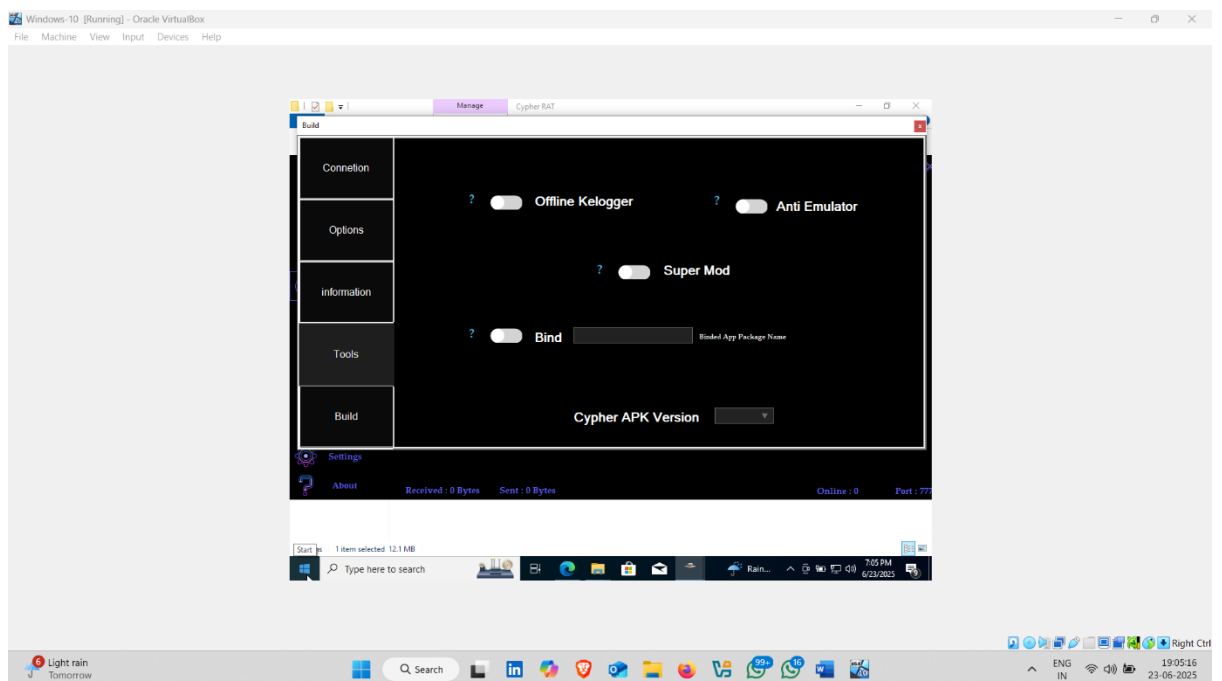

Selected Google translate , it means after installation application on target device , the name of the application will set as google translate

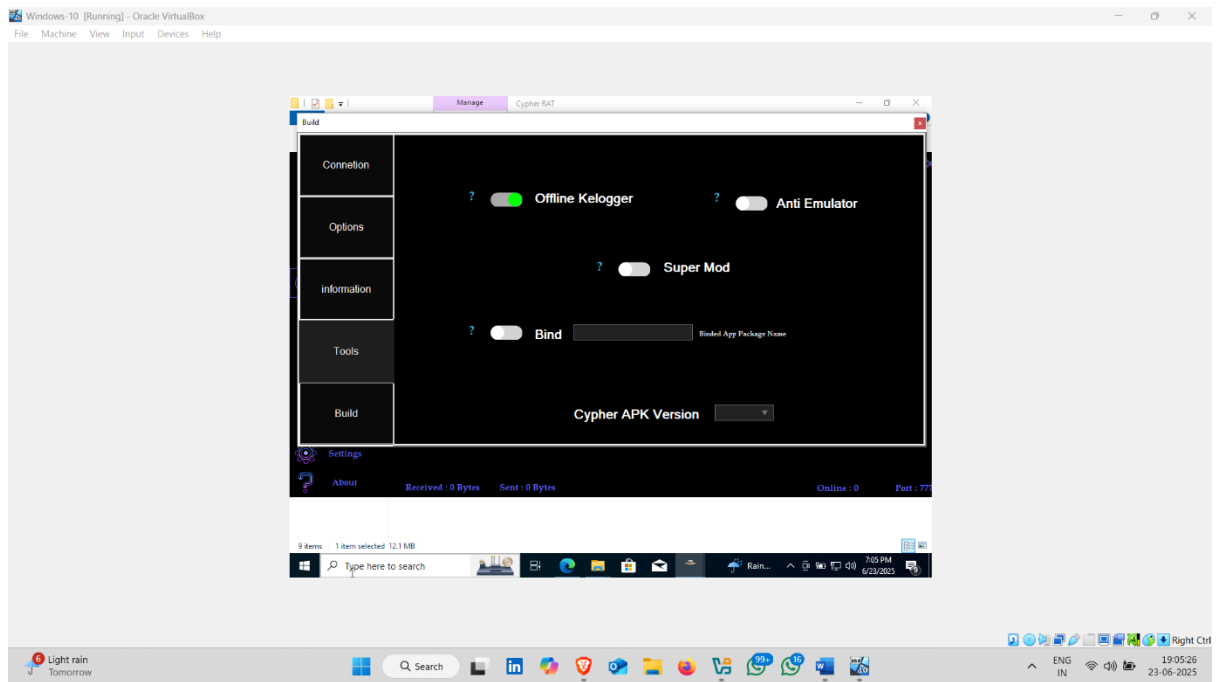

No changes in information tab

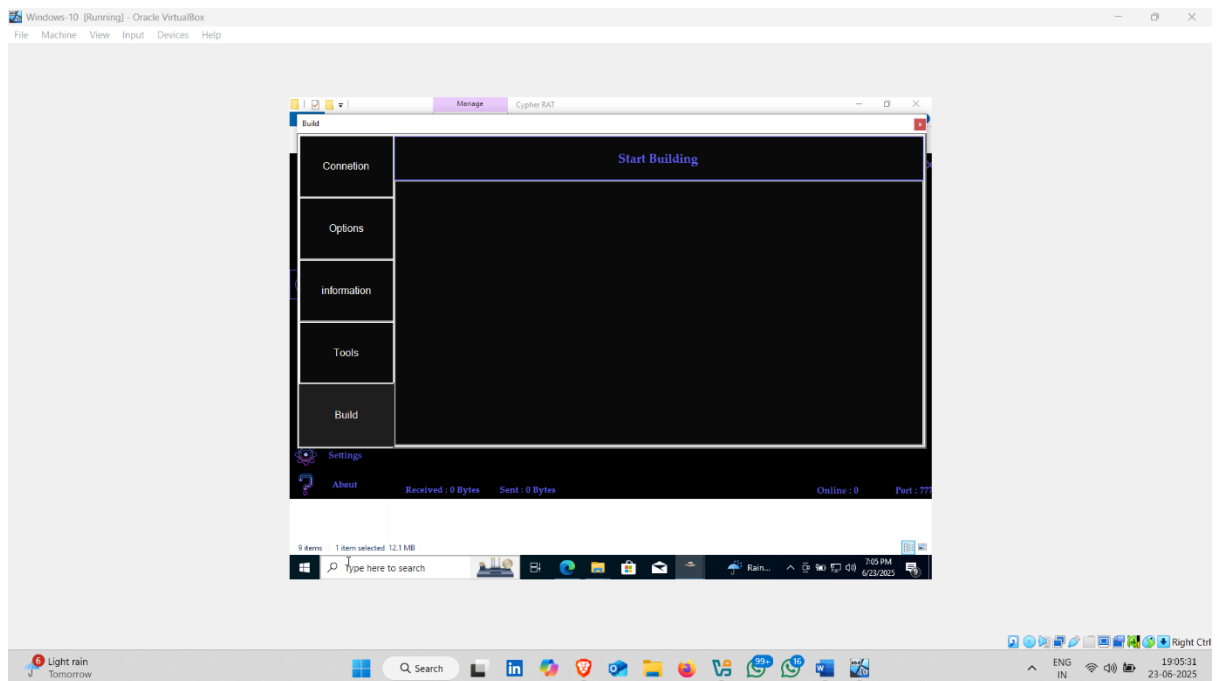

Now click on Tools option

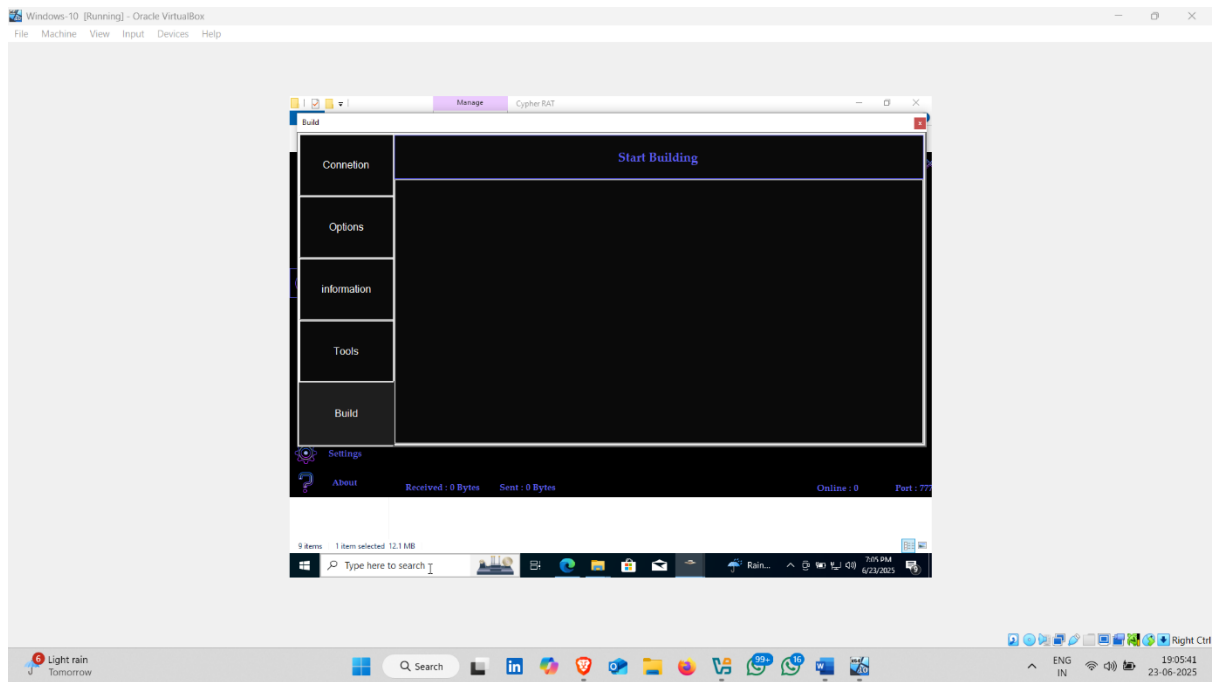

Turn On offline keylogger

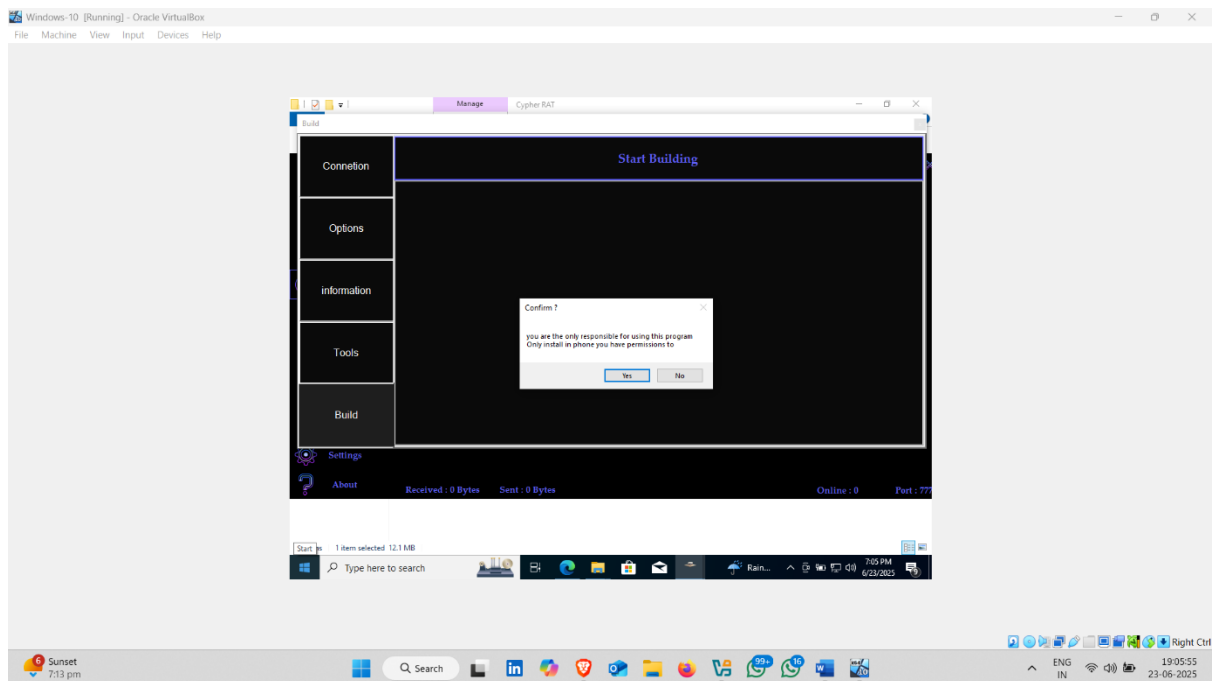

And click on build option

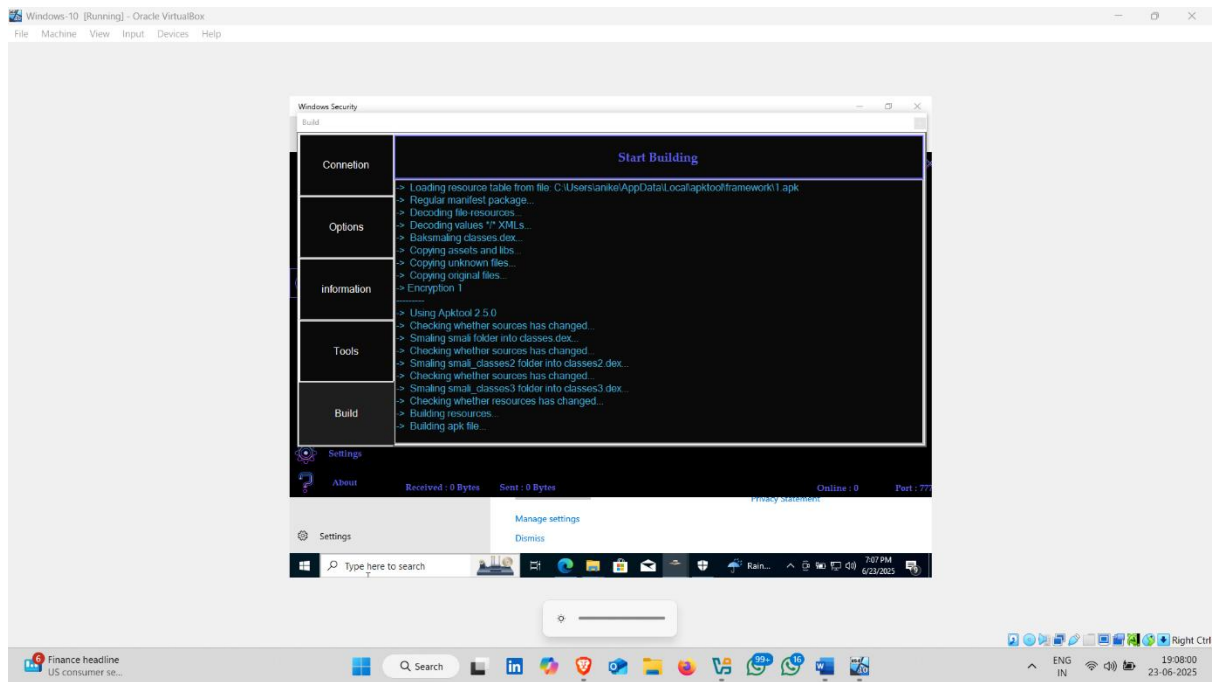

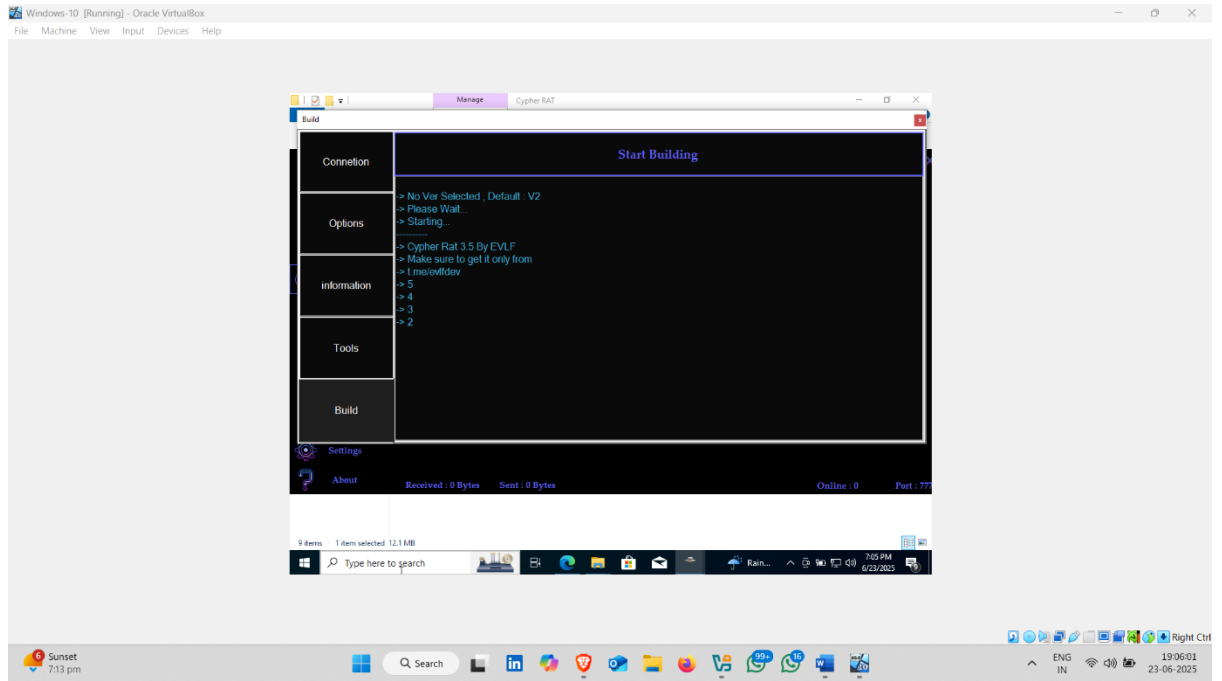

Now click on Start Building 🖱️✅

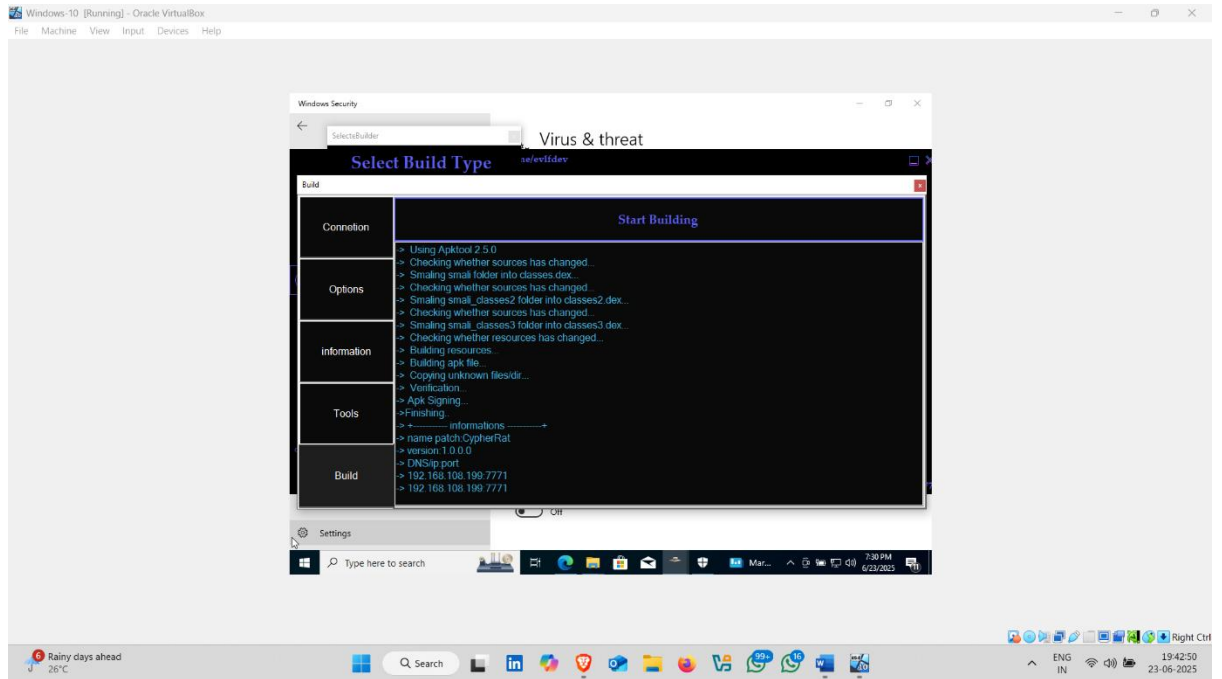

Click on Yes 

Here , it started Building Application

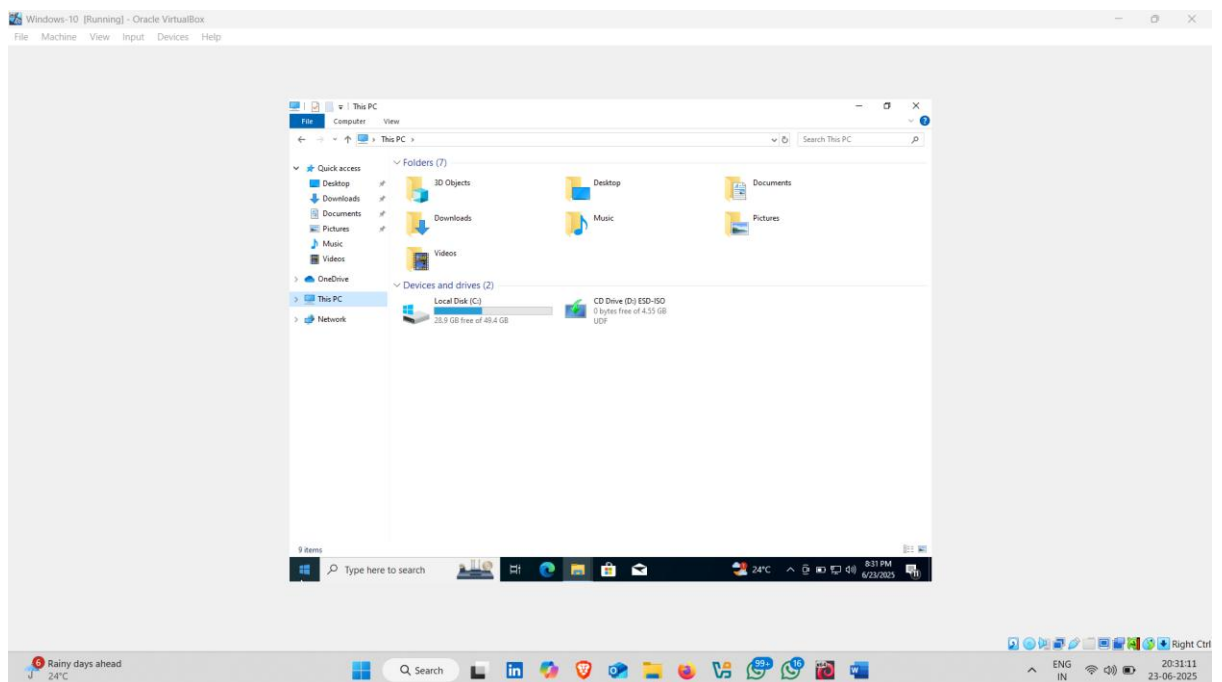

Apk build successfully  

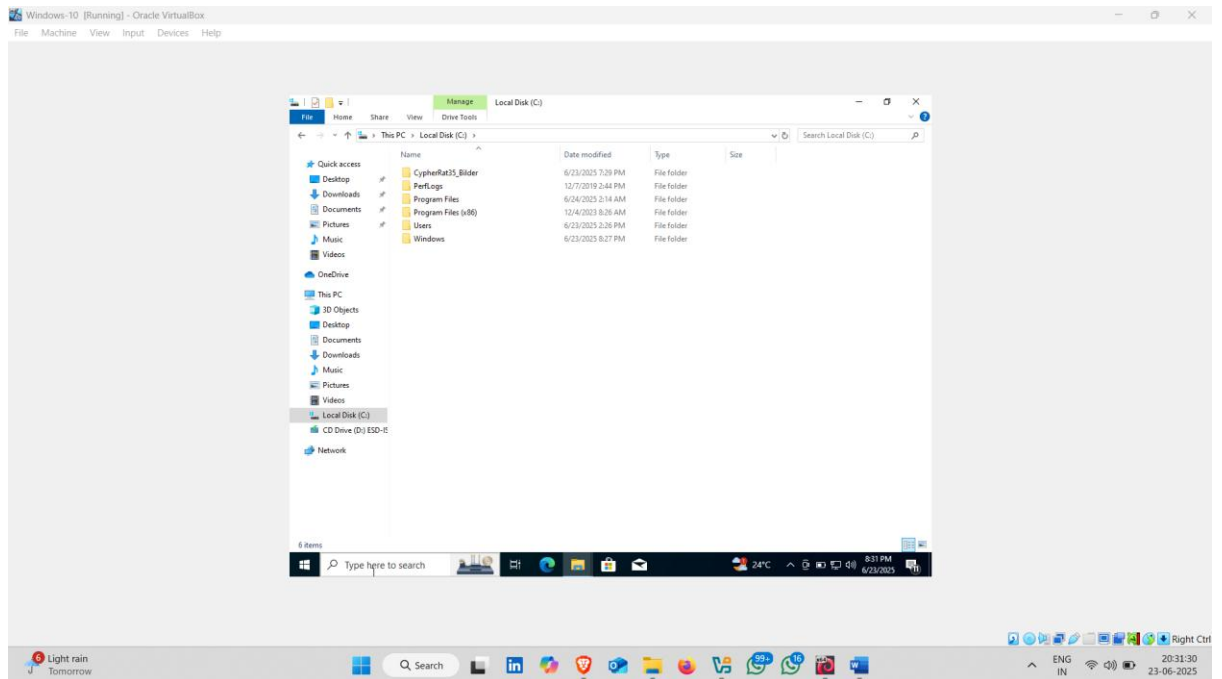

To check building application

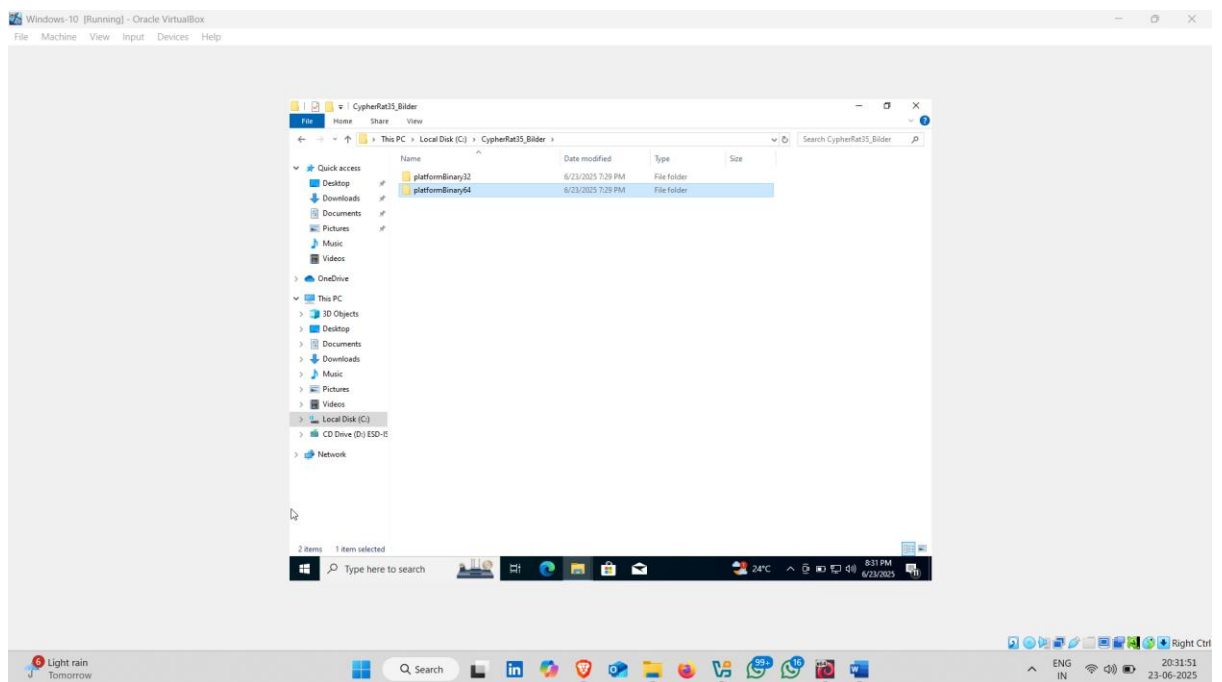

Go to C Drive

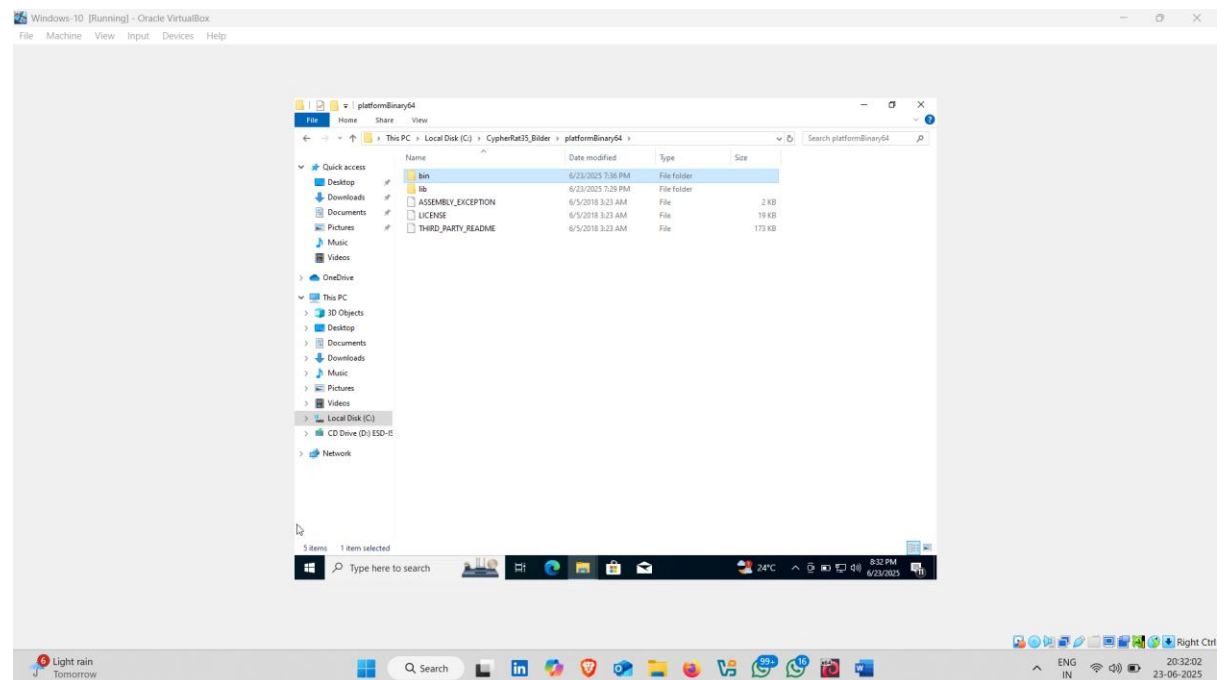

Open First Folder –CypherRat35_Bilder

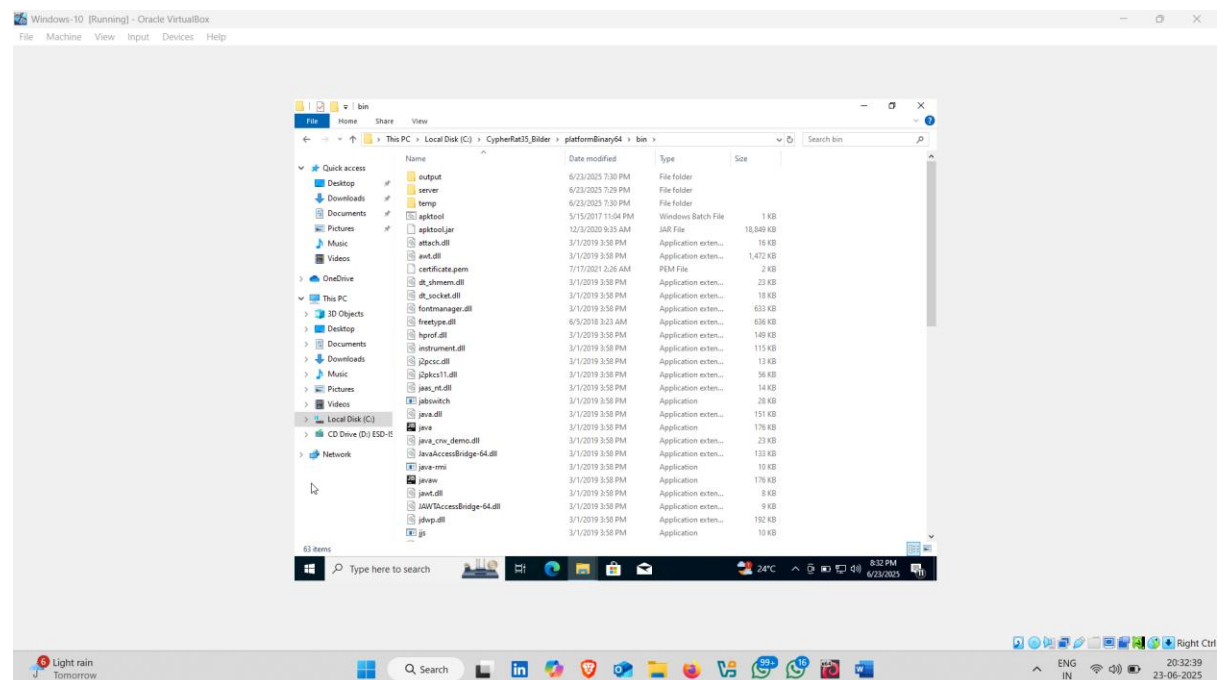

Click on PlatformBinary64 folder

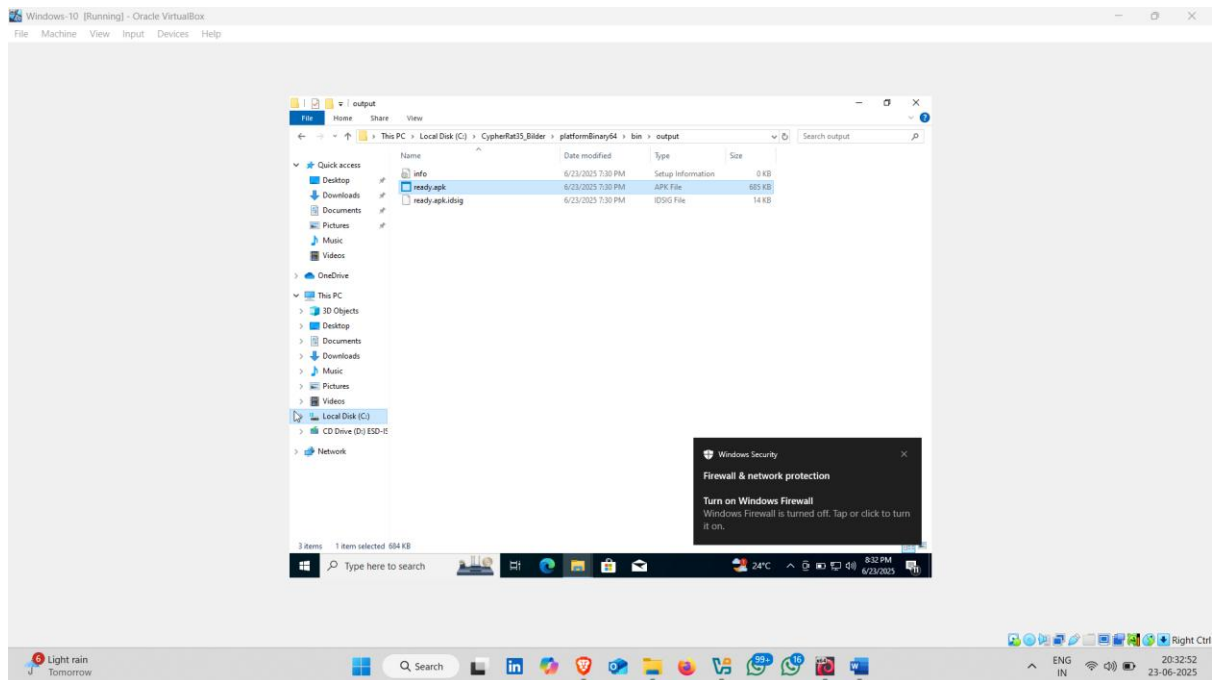

Now click on **Bin** folder

And then click on **Output** folder

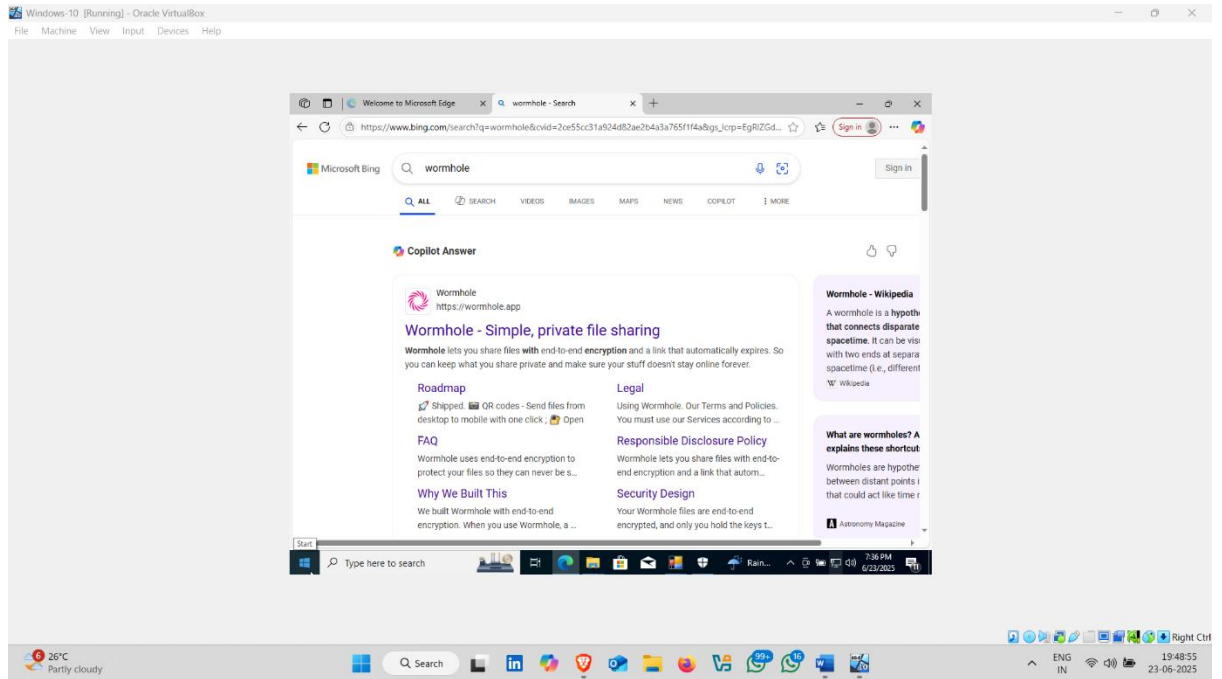

Application Build Successfully 🙌✅

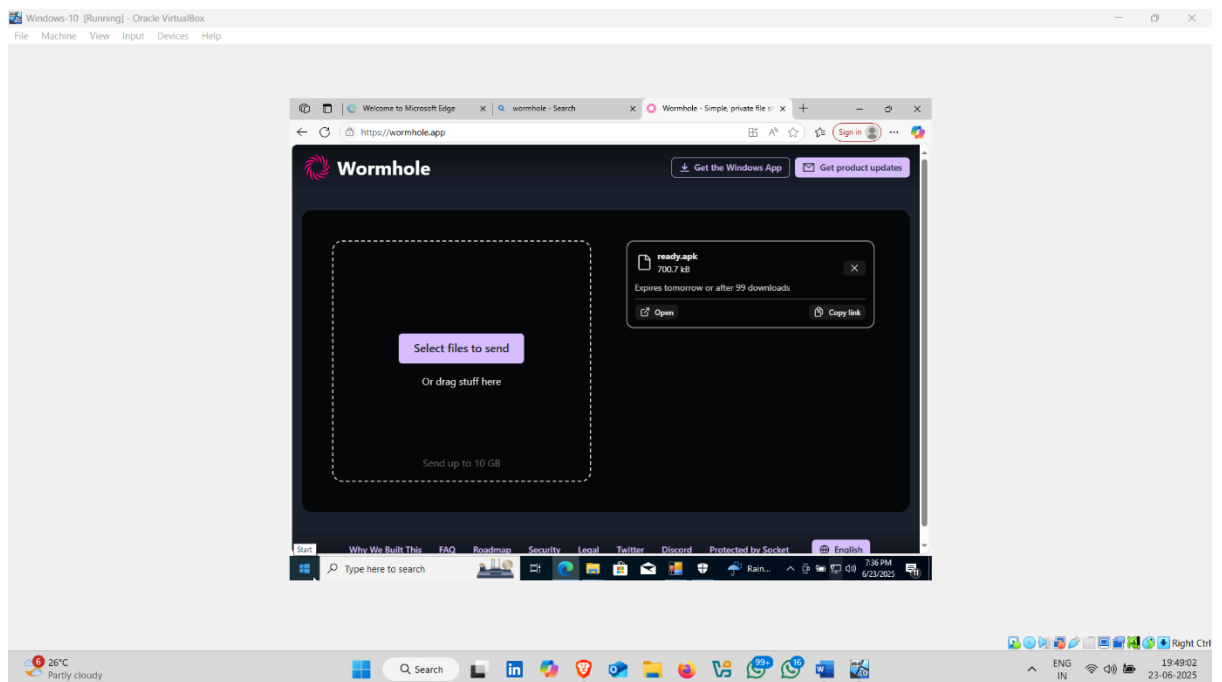

Now open Browser and search **wormhole** website 🙌

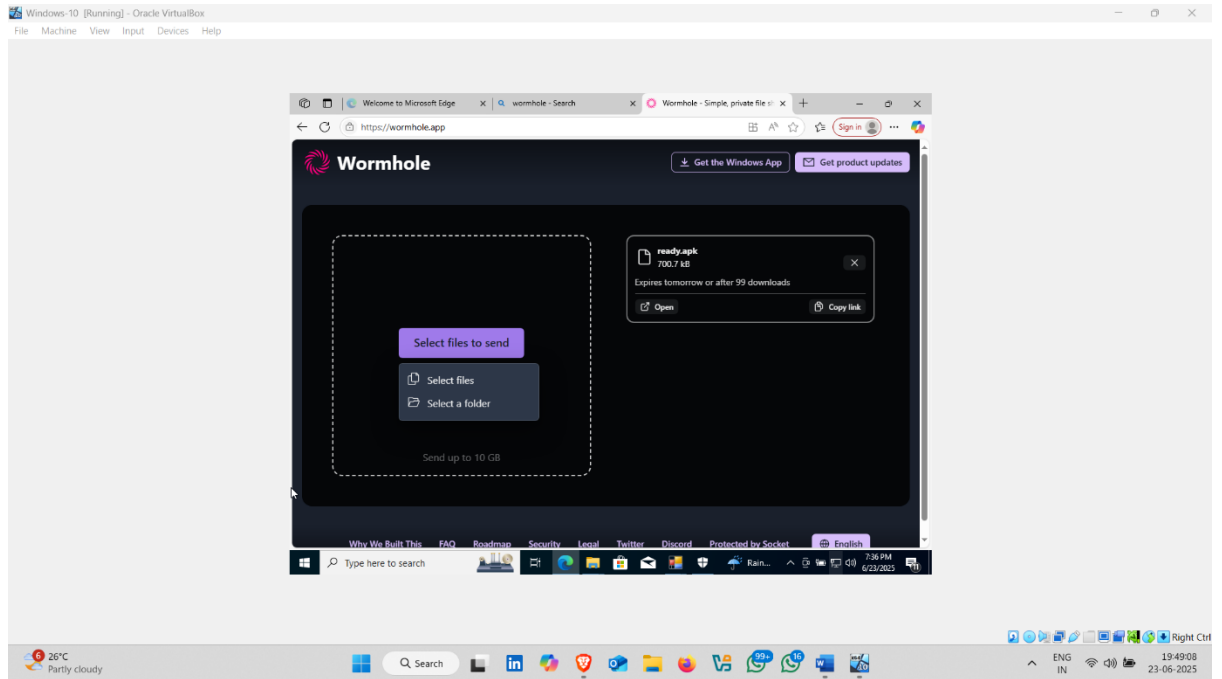

Wormhole is a **secure, end-to-end encrypted file sharing service** that allows you to send files quickly and securely across different networks using just a browser. No account is required.

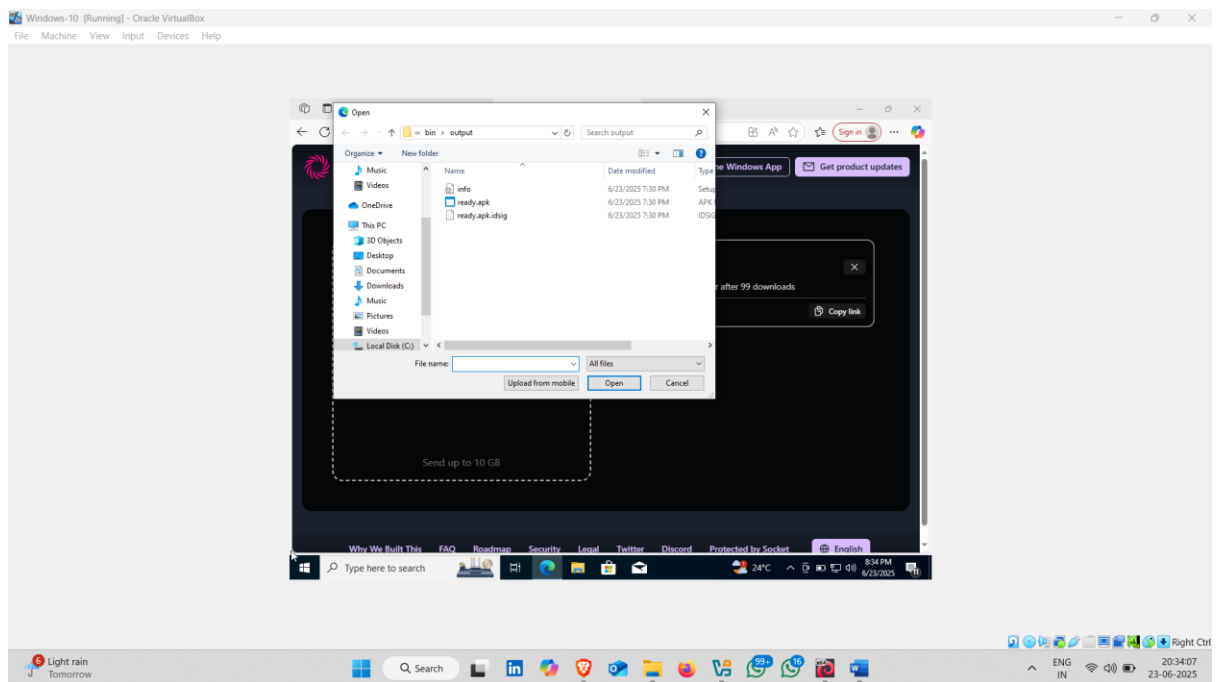

Click on select Files to Send

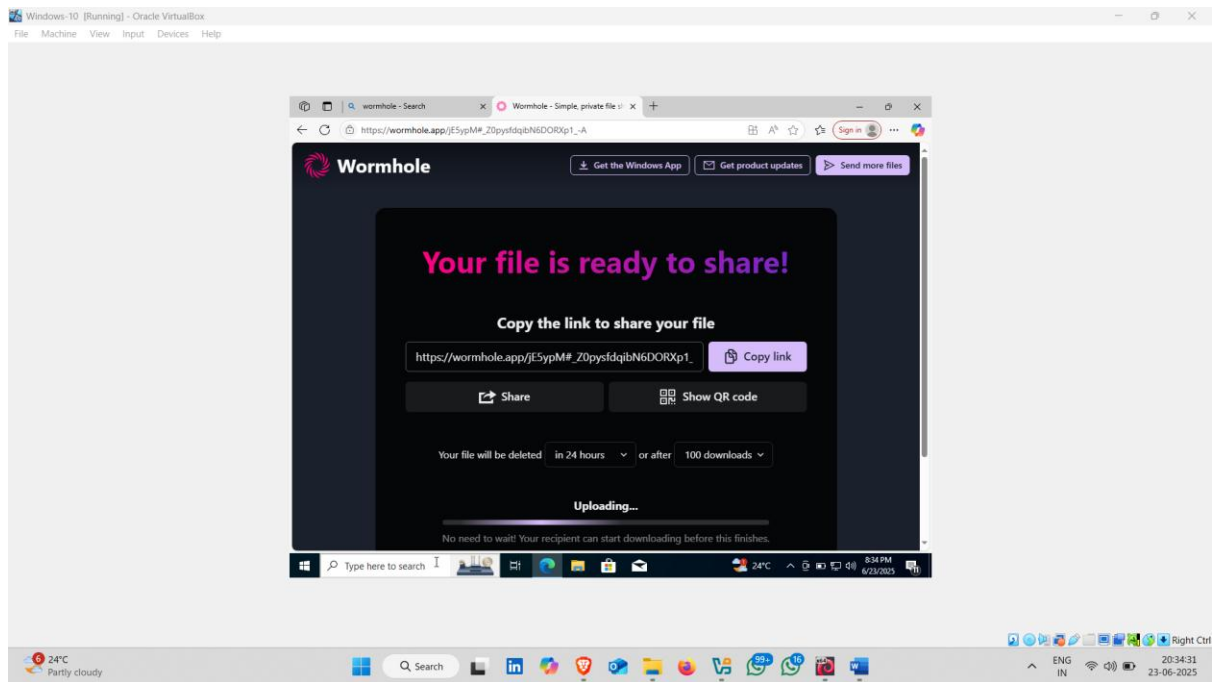

Select Files

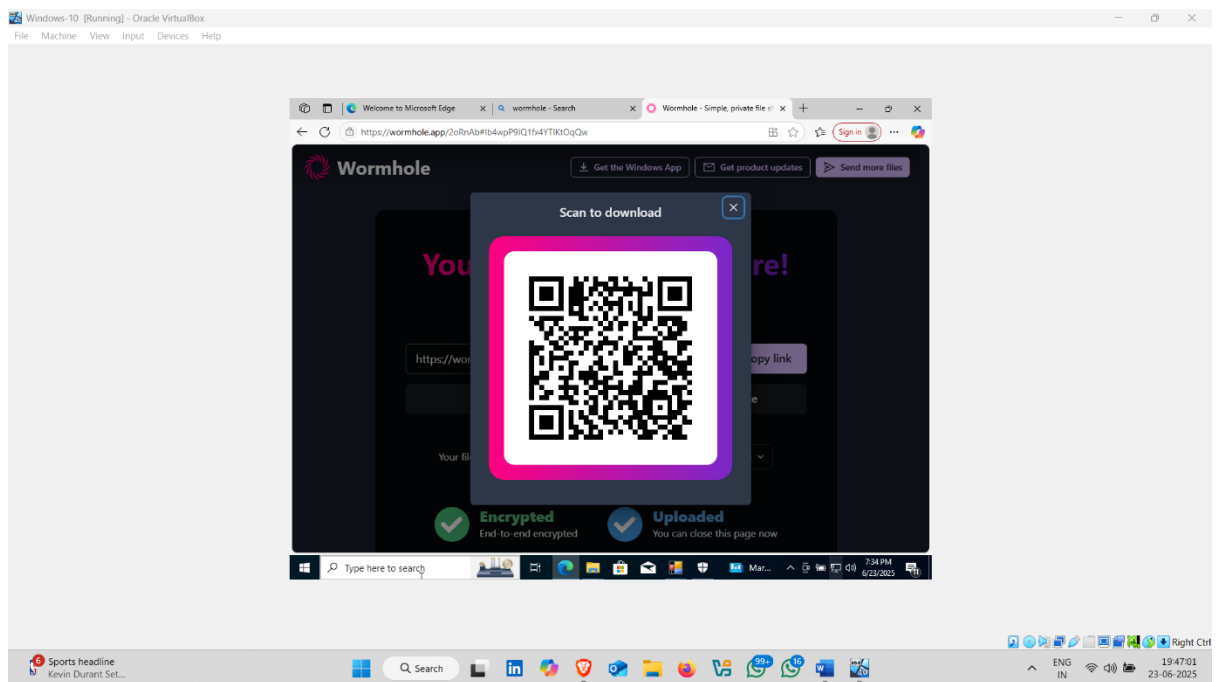

Now **select application** and then click on **open**

Here , its many way to share application to victim

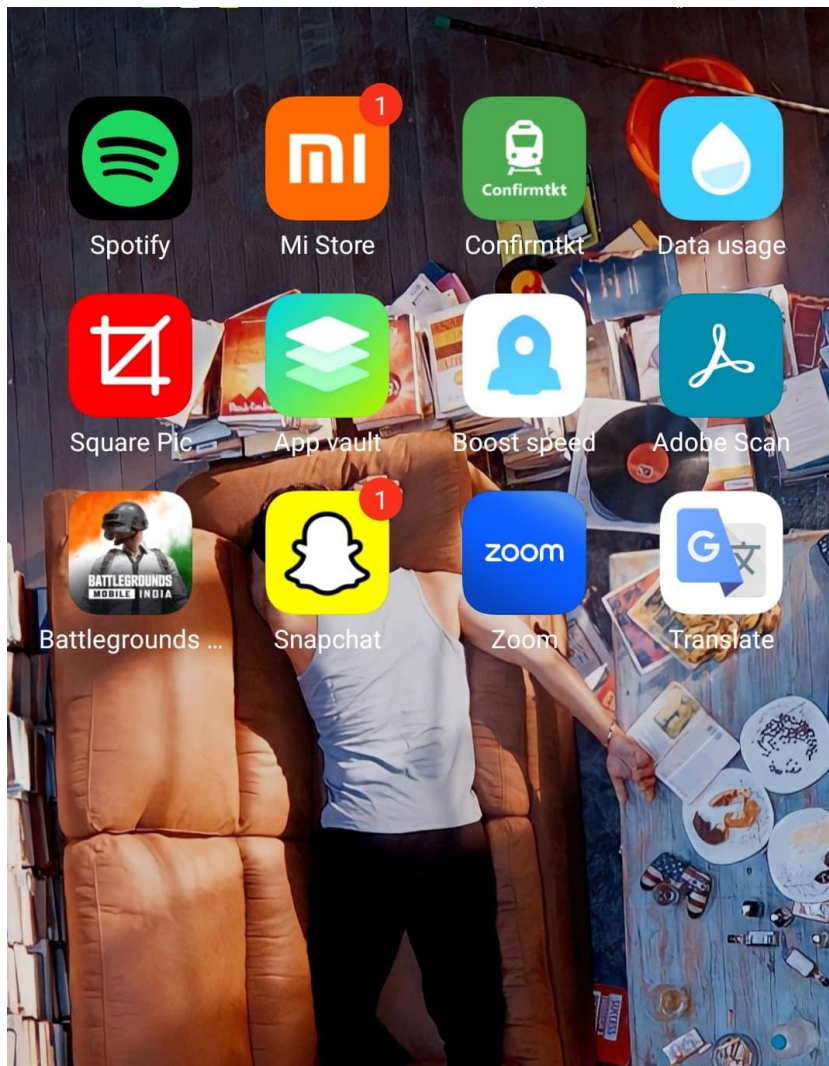

QR Code

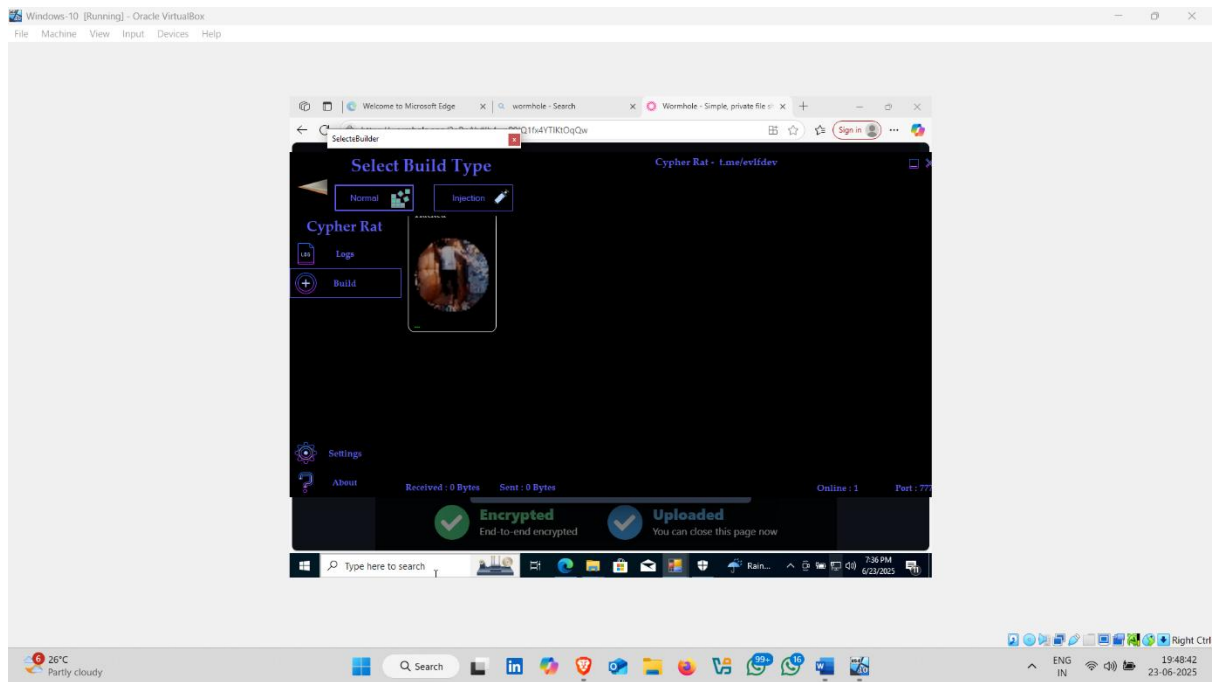

Started installing 🖱️

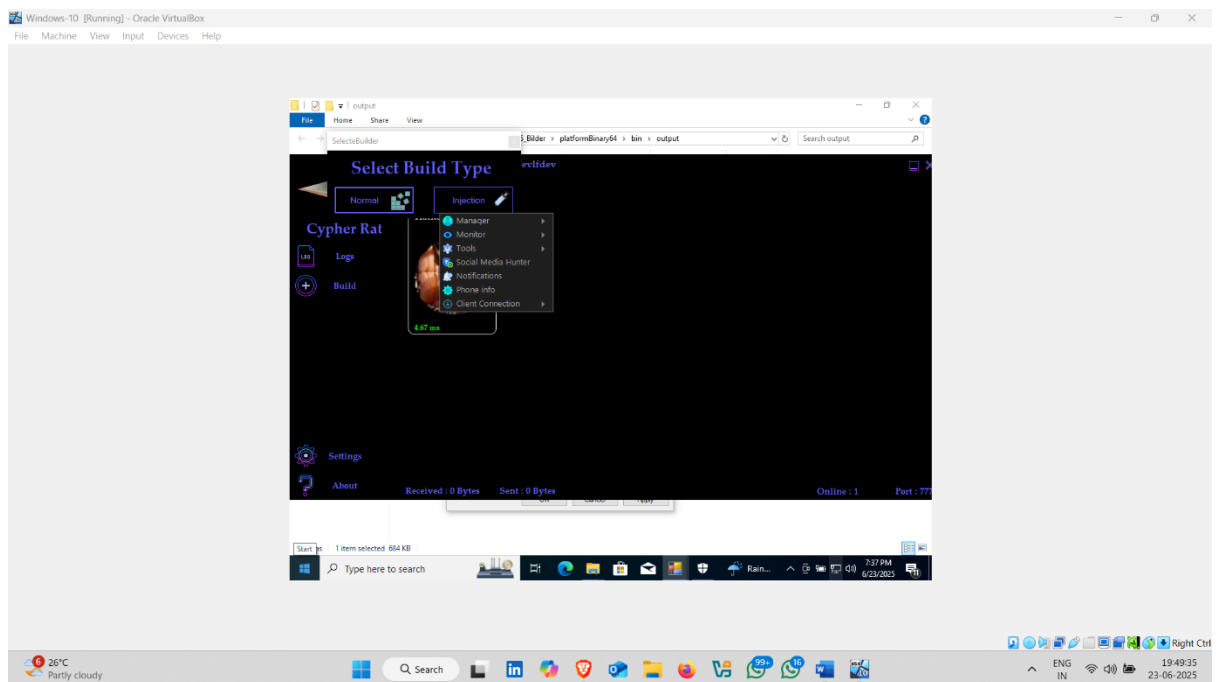

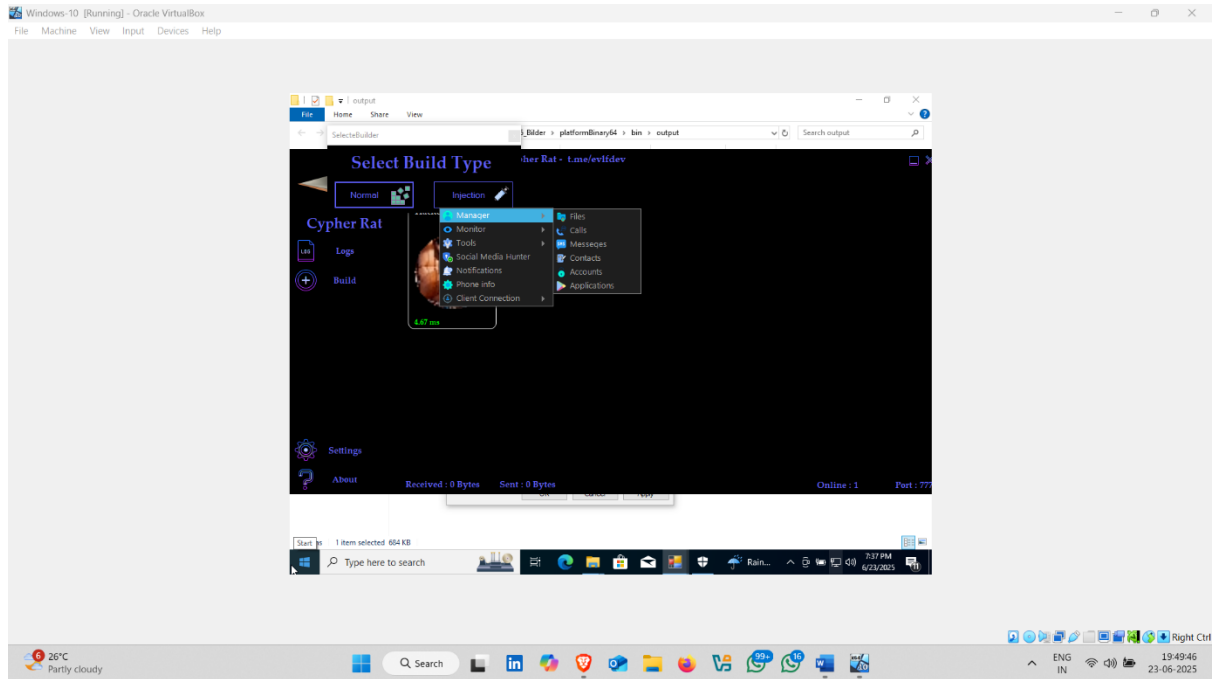

Gaining Access  

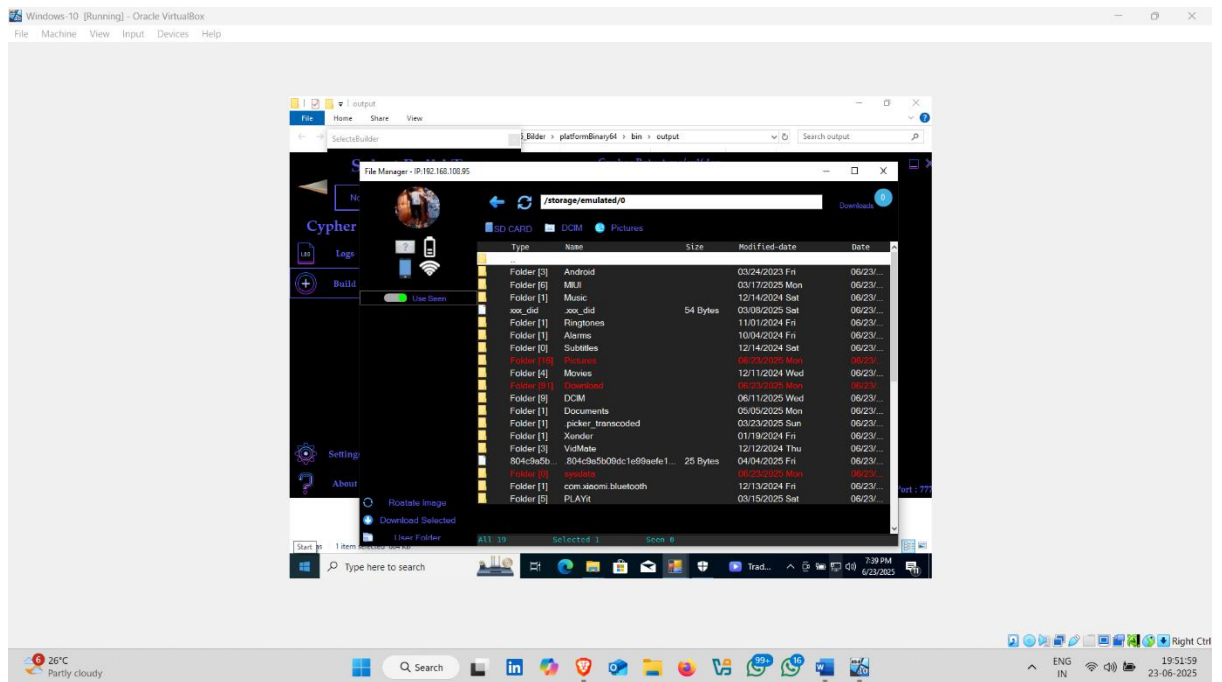

Now Click on device , options are appear

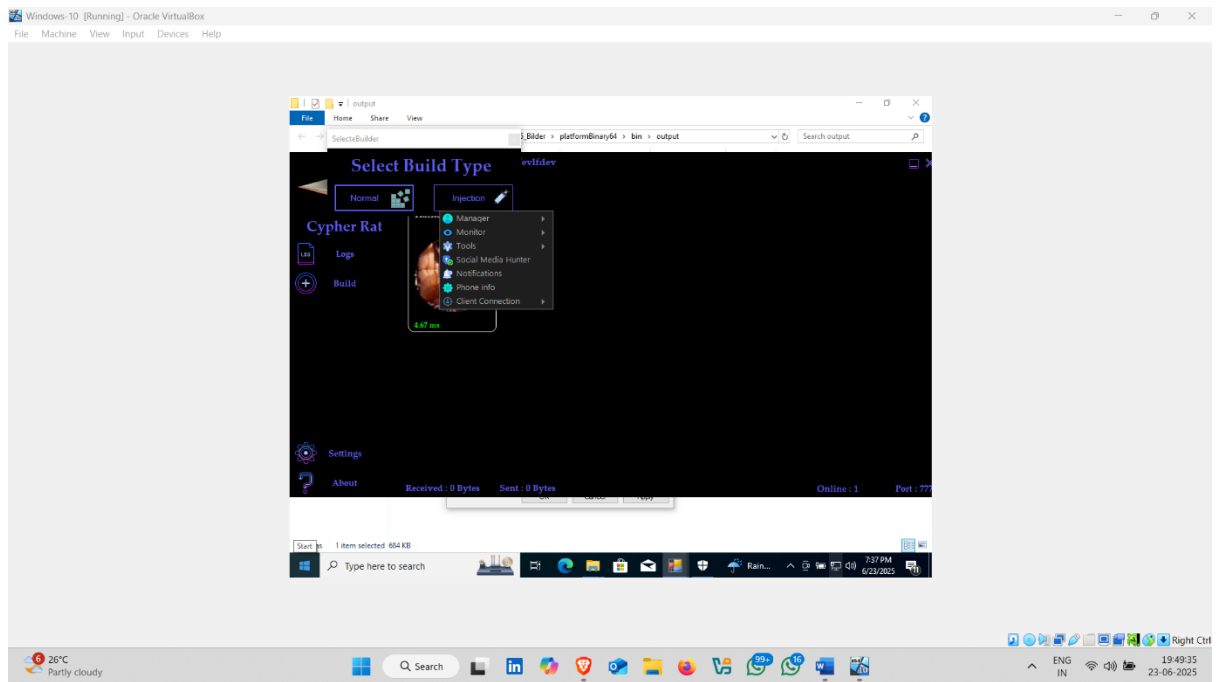

Now click on **manager** and then **Files** – to view all files/folder on victims device

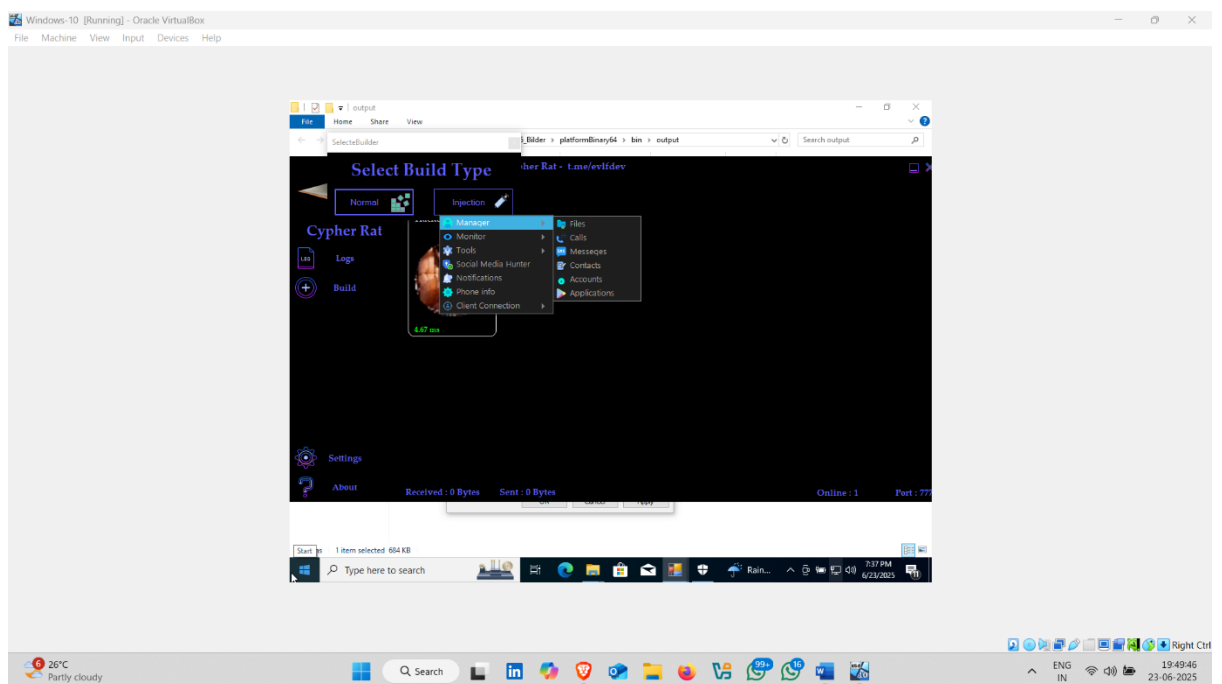

All files and folder 🖱️✅

Now , once again click on manager

And then click on Applications –To View All applications lists of target device

Installed apps ✅👉
